General Operation

SCOPE AND CONTENTS OF THIS MANUAL

This manual provides basic information on the installation, operation and maintenance of the MVP PRO or TCODE PRO.

This manual describes the characteristics of the tool at the time it is released in the market; therefore it may not capture later technological improvements introduced by Advanced Diagnostics USA as part of constant efforts to enhance the performance, ergonomics, safety and functionality of its products.

Advanced Diagnostics USA, reserves the right not to update the manual for all versions of the tool. Users must follow the instructions contained in this manual closely, especially safety instructions and maintenance.

Advanced Diagnostics USA cannot accept any legal liabilities for inaccuracies within this publication or for any work carried out using the MVP PRO or TCODE PRO or any of our other equipment & or accessories.

Advanced Diagnostics USA reserves the right to alter specifications without notice.

PRECAUTIONS & GENERAL SAFETY REQUIREMENTS

1. The MVP & TCODE are electronic pieces of equipment, and although designed for everyday environments they should not be exposed to excessive sunlight, low or high temperatures or immersed in liquids.

2. Return unit to carrying case when not in use.

3. Observe normal health and safety precautions when using this equipment.

4. Keep clear of all moving objects when near engine compartment.

5. Ignition circuits generate high voltages, extra precautions and care should be observed when diagnosing these systems.

6. Incorrect connections may damage sensitive electronic devices fitted to the vehicle.

7. Keep the unit away from spark plugs and coil leads to avoid measurement errors.

8. DO NOT disconnect any wiring harnesses or electronic component while ignition is ON.

9. DO NOT disconnect battery while engine is running.

10. Before any work is carried out, consult the Vehicle Manufacturer's recommended procedures to ensure any work is carried out in accordance with their instructions.

6 - GENERAL INFO

General Operation

INTENDED USE

The MVP, TCODE or TCODE PRO is an Advanced Serial Diagnostic system which has been designed and developed to offer the most advanced diagnostic capabilities.

IMPROPER USE

The improper use of the tool includes using the tool to perform an operation that it was not intended for. Should this occur Advanced Diagnostics USA shall take no responsibility for damage to materials or persons and shall consider all warranties on the tool void.

TECHNICAL SERVICE AND MAINTENANCE

The manufacturer shall be accountable for servicing during the warranty period and for causes related to the use of the tool. Ordinary maintenance operations shall be performed by the personnel using the MVP, TCODE or TCODE PRO. Any other operation (special maintenance, repairs, replacements etc..) shall be carried out by Advanced Diagnostics USA.

Advanced Diagnostics USA is available for clarification and advice, delivery of spare parts, and direct assistance through it's technical team. Any servicing by the customer during the warranty period must be previously authorized by Advanced Diagnostics USA. The warranty will become void in case of unauthorized operations, use of non-original spare-parts, and/or opening of the tool's outer shell/housing. Technical Support is considered a Privilege and is revocable at any time at Advanced Diagnostics USA discretion.

MANUFACTURER'S U.S. ADDRESS

For any further information or technical service related to maintenance or repairs, please contact:

Advanced Diagnostics USA Kaba IIco Corp. 400 Jeffreys Road Rocky Mount, NC 27804

Phone 1-702-799-9705 Internet: www.adusa.us

To facilitate communication, please state the name of the customer & the tool serial number.

THE **PRO** KEYPAD OPERATION

THE PRO KEYPAD OPERATION

TOUCH SCREEN KEYPAD:

At various stages in the software, you will be required to enter data (letters and/or numbers). These are entered via the touch screen keypad.

When the screen requires data to be entered, the first keypad option will be numbers 0 to 9. By pressing the right arrow, you will move to the next set of characters as shown. Pressing the left arrow moves you back to the previous set of characters.

Note: If a character is entered incorrectly, Press the BACK key

INITIAL OPERATION - INITIAL OPERATION

INITIAL OPERATION - INITIAL OPERATION

1) Connect the appropriate Dongle and diagnostic cable for the vehicle being programmed.

2) Press & Hold the Power button until the green LED illuminates / the tester emits a beep.

3) The Main Menu selection screen will appear.

4) If required, the contrast can be adjusted using the or buttons.

Note: The contrast can be adjusted on any screen.

NOTE: The *PRO* unit will not power up unless a dongle is plugged into the unit.

PRO UNIT IS PASSWORD PROTECTED

INITIAL OPERATION - INITIAL OPERATION

EVERY TIME THE PRO IS TURNED ON THE **UNIT'S 6 DIGIT SECURITY CODE MUST BE ENTERED** - This code is on the card that came with your kit. Keep this in a safe place and do not forget it.

Enter the 6 Digit security code using the screen keypad.

If the password is entered incorrectly 3 times the unit will 'lock' and you will have to contact Advanced Diagnostics USA tech support for unlocking.

Once "unlocked" the software will need to be re-loaded using the PC loader software.

STANDARD	BETA
SOFTWARE	SOFTWARE
V XXX	V XXX

SOFTWARE SELECTION

Select either STANDARD or BETA software.

Displays the current software and version loaded on the tester.

WARNING:

IF YOU CHOOSE BETA SOFTWARE, THIS IS ENTIRELY AT YOUR OWN RISK. ADVANCED DIAGNOSTICS TAKE NO RESPONSIBILITY FOR THIS SOFTWARE.

Please note that BETA software is the latest software that we are working on and is not fully tested, however it allows customers to use the latest software at their own risk.

ilco.

SOFTWARE UPDATING - Connections with dongle A in place

A Windows PC is needed in order to load and update the software on your PRO

Please visit www.adusa.us to download the necessary PC Loader software for your MVP PRO or TCODE PRO unit.

We recommend updating the software on your unit often to take advantage of the very latest programming software we have to offer.

Pro Loader Download (Software and Tokens)

Click on this link to download the AD Loader PC Software **UPDATING THE SOFTWARE / ADDING TOKENS ON MVP**

Video Tutorial: Pro Loader Installation

Video Tutorial: Adding Tokens To MVP Pro

Video Tutorial: Touch Screen Calibration

A) DUNCNOSTICS

MVP & T-CODE PRO MANUAL

=1/....

UPDATING THE SOFTWARE WHEN USING SMART DONGLE

SOFTWARE UPDATING - Connections with SMART DONGLE

SMART DONGLE OWNERS SHOULD ALWAYS UPDATE THE PRO WITH THE SMART DONGLE CONNECTED

Here we see MVP PRO all hooked up and ready to update.

 SMART DONGLE connected
PRO powered by ADC-241 Adaptor
USB cable connected to PC with loader program installed
Turn PRO on and leave on main screen
Use the loader program on the PC to load software and or tokens.

INITIAL OPERATION - INITIAL OPERATION

CONNECTING TO THE VEHICLE

ADC-250 cable shown connected to a typical OBD2 port location

Port locations vary on different makes & models but are typically just under the dash on the drivers side and not too hard to find.

A few oddballs like early Acura may be hidden behind a trap door or inside the ashtray area but most are easy to find.

WATCH VIDEO - ADC-250 main cable

MVP & T-CODE PRO MANUAL

VEHICLE SELECTION

Using the arrows, select the required manufacturer and press ENTER.

NOTE : For further information and operation refer to the specific MANUAL SECTIONS

A) DIAGNOSTICS

SMART CARD CALCULATOR

Over the last 2-3 years we have increased security on our software, to stop unauthorized counterfeit manufacturers copying our hardware and software.

All new kits now come equipped with a SMART CARD CALCULATOR KIT.

The smart card calculator was introduced for a number of reasons, the main ones being to increase the security of our software and to take away any need for customers to use our web sites for security.

The current software when connected to a vehicle will give you a security OUTCODE and a security INCODE is required to continue to use the software. This new system will enable customers to obtain this INCODE without using our web site, and no internet or mobile phone connection is required.

The calculator is 100% stand alone.

SMART CARD APPS for Smart Phones

Smart Card Apps are now available on Your Mobile Device.

The AD Smart Card App is a convenient alternative to your existing Smart Card & Calculator.

Visit the Apple APP store or the Google Play Store to download the app

Simply sign in using the AD account details that you created when first registering your PRO and you're ready to start using the App.

It's quick, easy and reduces typing errors and there is no need to recharge Your Smart Card.

The Smart Card App requires an internet connection.

If you are in an area with no internet connection, then the AD103 Security Calculator can still be used. Smart Card and the IQ App can 'hot swap' between each other, providing the user with seamless Functionality.

This app can only be used with PRO units that have been registered to your AD account.

I/Q GLOBAL APP for Smart Phones

With Advanced Diagnostics being a GLOBAL company with programming for vehicles and systems found all over the world the I/Q app can be an extremely valuable resource for information on vehicles. Some may have yet to make into the mainstream info contained in this USA specific manual. Click on the link for info on how to download I/Q Mobile.

MVP PRO, T-CODE PRO Device END USER AGREEMENT

ADVANCED DIAGNOSTICS USA ("Licensor") is willing to license to the enclosed software and documentation ("the Software") for use on the MVP, TCODE or TCODE PRO device to you only on the condition that you accept all of the terms in this Agreement.

OPENING THIS PACKAGE OR USING THE DEVICE INDICATES YOUR ACCEPTANCE OF THIS END USER AGREEMENT ("TERMS AND CONDITIONS" OR "TERMS") BETWEEN YOU AND ADVANCED DIAGNOSTICS USA. IF YOU DO NOT ACCEPT THESE TERMS, YOU MUST RETURN THIS PACKAGE WITHIN 15 DAYS OF OBTAINING THIS PACKAGE, WITH YOUR ORIGINAL RECEIPT, AND YOU WILL BE PROVIDED WITH A FULL REFUND. ("YOU" MEANS THE INDIVIDUAL PURCHASING THE DEVICE.)

1. License. You are permitted to use the Software in machine-readable form only, solely on the MVP PRO or T-CODE PRO with authorized Key Blanks and solely for the lawful purpose of creating keys. The MVP PRO & T-CODE PRO includes the physical MVP PRO or T-CODE PRO device, the software and documentation and instructions any modifications or updates we may make available (the "Software"). The MVP PRO may also include a certain number of Tokens, which you use to make new keys ("Tokens"). In the event you prepay any money for the purchase of Tokens or for any other reason, all prepayment amounts are non-refundable. You are responsible for all use of the Device, whether it is with or without your consent. Each time You make a new Key, one Token is subtracted from your MVP PRO. Please enter information into the MVP PRO carefully. There is no refund for Tokens for any reason. We are not responsible for your proper or improper, careful or not careful use of the MVP PRO, so please be sure to know all required information such as the Year, Make and Model of the vehicle you are dealing with when using the MVP PRO. All rates are subject to change without prior notice, and additional regulatory surcharges and taxes may apply.

2. Restrictions. You may not use, copy, modify or transfer the Software or any copy thereof, in whole or in part except as set forth in this Agreement. You may not reverse engineer, disassemble, decompile, interface or transfer the Software or otherwise attempt to derive the source code of the Software, or authorize any third party to do any of the foregoing, except solely as permitted under applicable US law. Any attempt to transfer any of the rights, duties or obligations hereunder are null and void. You may not rent, lease, loan, resell for profit or distribute the Software, or any part thereof.

3. Ownership. The Software is licensed, not sold to you for use only under the terms under this Agreement, and ADVANCED DIAGNOS-TICS USA and its licensors retain all rights not expressly granted to you. You own the Device and the media, if any, on which the Software is recorded, but ADVANCED DIAGNOSTICS USA retains ownership of all copies of the Software itself.

4. Term and Termination. This Agreement will be terminated immediately upon notice to you if you materially breach any term or condition of this Agreement. You agree upon termination to promptly return any and all copies of the Program MVP PRO or T-CODE PRO Device and Instructions to ADVANCED DIAGNOSTICS USA, together with any other material you have received from ADVANCED DIAGNOSTICS USA in connection with this MVP PRO or T-CODE PRO Device.

5. Warranty Disclaimer. Other than the Limited Warranty provided with the Device, the Software and Device provided "AS IS" and ADVANCED DIAGNOSTICS USA and its suppliers expressly disclaim all warranties and conditions including the implied warranties of merchantability, fitness for a particular purpose, non-infringement and title. No oral or written information or advice given by ADVANCED DIAGNOSTICS USA, its employees, distributors, dealers or agents shall increase the scope of the above warranties or create any new warranties. Some jurisdictions do not allow the disclaimer of certain implied warranties and thus the above disclaimer may not apply to you.

6. Limitation of Remedies. REGARDLESS OF WHETHER ANY REMEDY SET FORTH HEREIN FAILS OF ITS ESSENTIAL PURPOSE OR OTHERWISE, IN NO EVENT WILL ADVANCED DIAGNOSTICS USA OR ITS LICENSORS BE LIABLE FOR ANY INDIRECT DAMAGES OR OTHER RELIEF ARISING OUT OF YOUR USE OR INABILITY TO USE THE DEVICE INCLUDING, BUT NOT LIMITED TO, LOST PROFITS, LOST BUSINESS OR LOST OPPORTUNITY, OR ANY SPECIAL, INCIDENTAL, CONSEQUENTIAL OR EXEMPLARY DAMAGES, INCLUD-ING LEGAL FEES, ARISING OUT OF SUCH USE OR INABILITY TO USE THE DEVICE, EVEN ADVANCED DIAGNOSTICS USA ITS LICENSORS OR AN AUTHORIZED ADVANCED DIAGNOSTICS USA DISTRIBUTOR HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES, OR FOR ANY CLAIM BY ANY OTHER PARTY. IN NO EVENT SHALL ADVANCED DIAGNOSTICS USA OR ITS LICENSORS LIABILITY EXCEED THE AMOUNT RECEIVED BY AD USA FROM YOU FOR THIS DEVICE OR THE SOFTWARE. Some jurisdictions do not allow the exclusion or limitation of incidental, consequential, indirect or special damages, so the above limitation may in part not apply to You.

7. Export Law. The Software is for use only in the US and is subject to US Export Control laws and may be subject to export or import regulations in other countries. You agree to strictly comply with all such laws and regulations and shall indemnify ADVANCED DIAGNOSTICS USA for any breach by you of such laws.

MVP PRO, T-CODE PRO Device END USER AGREEMENT

continued...

8. General. This Agreement will be governed by the laws of the State of NORTH CAROLINA in the United States of America without regards to the conflict of law rules or principles. If any provision of this Agreement is held unenforceable, that provision will be removed and the remaining provisions will remain in full force. This Agreement is the complete and exclusive statement of the agreement between You and ADVANCED DIAGNOSTICS USA, Kaba IIco Corp. with regards to this subject matter and supersedes any and all prior agreement, negotiation discussion, oral or written. This Agreement may only be modified by a writing signed by both parties. If you have any questions regarding this Agreement or the Software, please contact ADVANCED DIAGNOSTICS USA at 1-702-799-9705. Disputed charges will be considered in our sole discretion if you contact us within 15 days of the posted charge to ADVANCED DIAGNOSTICS USA..

LIMITED MANUFACTURER'S WARRANTY

Advanced Diagnostics UK, LTD. "AD UK", the manufacturer of the MVP PRO & T-CODE PRO Device, provides the following limited warranty:

1. LABOR: For a period of 365 days from the date of purchase, if this Device is determined to be defective, AD UK will repair or replace the Product, at its option, at no charge, or pay the labor charges to any AD UK authorized service facility. After 365 days, You must pay for all labor charges.

2. PARTS: In addition, AD UK will supply, at no charge, new or rebuilt replacements in exchange for defective parts for a period of 1 year at its sole discretion. To obtain warranty service, You must take the MVP PRO or T-CODE PRO Device, or deliver the Device freight prepaid, in either its original packaging or packaging affording an equal degree of protection, to AD UK's distributor: Advanced Diagnostics USA ,Kaba IIco Corp. 400 Jeffreys Road Rocky Mount, NC 27804 Tel: 1-702-799-9705.

This warranty does not cover: Customer instruction, installation or set up adjustments, Any use not expressly permitted by the MVP PRO or T-CODE PRO Device End User License Agreement, Cosmetic damage or damage due to acts of God, accident, misuse, abuse, negligence, commercial use, or modification of or to any part of the Device, Any modification, adjustment of MVP PRO or T-CODE PRO Device or combination of MVP PRO or T-CODE PRO Device with any other equipment or software, Damage due to improper use or maintenance, connection to improper voltage supply, misuse of Tokens, Keys or Software or attempted repair undertaken by anyone other than AD UK or its authorized distributors, MVP PRO or T-CODE PRO Devices and all Software included sold AS IS or WITH ALL FAULTS, or consumables, such as batteries or Tokens.

This warranty is only valid in the United States.

REPAIR OR REPLACEMENT AS PROVIDED UNDER THIS WARRANTY IS THE EXCLUSIVE REMEDY OF THE CONSUMER. ADVANCED DIAGNOSTICS UK AND ITS DISTRIBUTOR ADVANCED DIAGNOSTICS USA, INC. SHALL NOT BE LIABLE FOR ANY INCI-DENTAL OR CONSEQUENTIAL DAMAGES FOR BREACH OF ANY EXPRESS OR IMPLIED WARRANTY ON THIS PRODUCT, EXCEPT TO THE EXTENT PROHIBITED BY APPLICABLE LAW, ANY IMPLIED WARRANTY OR MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE ON THIS DEVICE IS LIMITED IN DURATION FOR THE DURATION OF THIS WARRANTY. Some states do not allow limitations on warranties, so these limitations may not apply to You. This warranty gives You specific legal rights, and You may have other rights, which vary from state to state.

PROPER VEHICLE IDENTIFICATION IS ESSENTIAL

TO SUCCESS!

Always check the VIN to accurately determine the MODEL YEAR of the car you are working on. Using the chart below will help you easily verify this information.

10th Digit of the VIN = Model Year					
1996 = T	2007 = 7				
1997 = V	2008 = 8				
1998 = W	2009 = 9				
1999 = X	2010 = A				
2000 = Y	2011 = B				
2001 = 1	2012 = C				
2002 = 2	2013 = D				
2003 = 3	2014 = E				
2004 = 4	2015 = F				
2005 = 5	2016 = G				
2006 = 6	2017 = H				
1N4AL3AP0DN451923 D= 2013 model year					

Example-

LOOK AT 10TH POSITION OF THE VIN

STRONG BATTERY VOLTAGE IS IMPORTANT!

Make sure when programming that the vehicle battery is kept at AT LEAST 12 Volts.

Use a jump pack or jumper cables.

KEEP YOUR MVP PRO / T-CODE PRO UPDATED

ILCO KEY CUTTING EQUIPMENT

Ilco offers a complete line of top qualtity key cutting equipment for the USA market. Here are just a few of our most popular machine that go hand in hand with T-Code / MVP!

Futura Pro

The successor to the popular Futura, the Futura Pro combines its signature dual cutting stations, with faster cutting, and improved software. The Futura Pro is the electronic key machine for Edge-Cut, Laser-Cut, Cruciform, and Dimple keys.

innovative, amazing machine.

Futura Pro is a powerful machine for the professional key cutters yet also ideal for the less experienced users with step-by-step prompts throughout the cutting processes.

Ultramodern in design and engineered to the highest quality standards; you can be assured of the most accurate, precise cutting of a variety of key styles on one

Bravo III with EZ-Jaw®

The Bravo III is a high precision, heavy duty semi-automatic key machine designed for ultra reliability and ease of use.

characteristics.

The Bravo III key machine is provided with the CU50A cutter and a corresponding cutter guide. The durable cobalt steel cutter ensures a smooth, clean, accurate cut. The Bravo III is designed to duplicate common cylinder and automotive key blanks as well as Titan®and older GM® with 90 degree first cut bitting

ACURA & HONDA SECTION

T-CODE SOFTWARE PACKS:

- (ADS-110) Acura & Honda Basic
- (ADS-166) Honda Accord 2008
- (ADS-193) Honda & Acura Proximity

(Software names generally refer to the date of release on the T-CODE not the years of vehicles covered).

ACURA & HONDA

READ THIS BEFORE WORKING ON ANY ACURA HONDA VEHICLES THAT MAY HAVE HAD COMPONENTS CHANGED. Component matching on ALL Type3 and up systems. If any computer components such as PCM, Immo ring, etc. Have been replaced or swapped out.

(By a body shop for example, when a new steering collumn has been installed.)

A DEALER TOOL will be required in order to re-match components.

Simply programming the keys with MVP or TCODE will not perform the necessary matching functions!

READ THIS BEFORE WORKING ON ANY ACURA HONDA VEHICLES THAT MAY HAVE HAD COMPONENTS CHANGED. Component matching on ALL Type3 and up systems.

If any computer components such as PCM, Immo ring, etc. Have been replaced or swapped out.

(By a body shop for example, when a new steering collumn has been installed.)

A DEALER TOOL will be required in order to re-match components. Simply programming the keys with MVP or TCODE will not perform the necessary matching functions!
ACURA & HONDA

1/100

Type 1 Systems

Use this method for: <u>ADDING</u> keys-or when <u>REPLACING</u> the Immobilizer Computer (Must have Red & Black Keys)

START HERE:

Select: +HONDA ACURA +BY SYSTEM

REFER TO THE KEY LOOK UP GRID FOR PROPER SYSTEM SELECTION

Do Not Use the Red key unless prompted by the Device.

SWITCH IGNITION ON

PRESS ENTER KEY

NOTE:

Make sure the Black key is in the ignition and turned to the "II" position (ON). Do Not Use the Red key unless prompted by the Device.

REQUIRES SMART CARD CALCULATOR OR WEB APP

ECU IDENTIFICATION

HONDA IMMO. USA

PRESS ENTER KEY

DIAGNOSTIC MENU

ECU IDENTIFICATION FAULT CODES > SPECIAL FUNCTIONS

NOTE: You will need to follow the Device screens precisely. You might consider turning off your cell phone and pager.

Follow the screen prompts, there may a delay in communication speed, wait until prompted again.

When programming more than 1 key - you will be prompted for the "Next" key which means the next new key.

Continue to follow the screen prompts until the programming is finished.

DIAGNOSTIC MENU

> PROGRAM KEYS KEY INFORMATION

REWRITE IMMOBILIZER

NO. OF ORIGINAL KEYS

DO NOT INCLUDE RED LEARNING KEY

Enter number "1" - Since the Black key that came with the new immobilizer box is considered an original key as it is matched to the new immobilizer box.

floo

TYPE 2 THRU TYPE 13 (SELECTED BY SYSTEM) KEYED IGNITION SYSTEMS

Use this method to PROGRAM KEYS - CONTINUED

Next, A countdown of the Immobilizer system verification will go from 10 seconds to zero.

PROGRAMMING KEYS

IS IMMO. LIGHT OUT? '1' = YES '2' = NO

NOTE: Check the dash to verify the Immobilizer indicator light is out.

If you have programmed the vehicle using TYPE 2A and the Green IMMO light did not go out after the 10 second wait. Try again this time with TYPE 2C.

SOME CARS MAY BE LISTED AS TYPE 7 / 8 On these try TYPE 7 first, if you get access denied switch to TYPE 8. One will go thru.

PROGRAMMING KEYS

SWITCH IGNITION OFF

PROGRAMMING KEYS

SWITCH IGNITION ON WITH SAME KEY KEY INFORMATION SYSTEM: X KEYS STORED: X TYPE: X

PRESS ENTER KEY

NOTE: At this point you are all done.

All we did really was to carefully follow the prompts on the tester watching for when to switch the ignition on and off and when to switch keys (if doing more than 1).

TROUBLESHOOTING:

IF THE THEFT LIGHT DOES NOT GO OUT AT THE END OF THE PROCEDURE, MOST LIKELY YOU ARE TRYING TO PROGRAM THE WRONG KEY / CHIP TYPE.

IF THE LIGHT GOES OUT AT THE END OF THE PROCEDURE BUT THEN COMES BACK ON AFTER THE FIRST TIME YOU TURN THE KEY OFF AND THEN BACK ON THIS IS USUALLY A MIS-MATCH / CHANGED COMPONENT SITUATION.

BEWARE IF MECHANICS HAVE CHANGED IGNITION OR OTHER COMPONENTS

>>>>>WARNING<<<<<<

On TYPE3 and up Honda & Acura systems:

If any computer components have been changed or replaced MATCHING by the dealer will need to be performed before ANY of the procedures shown here will work. These procedures can only replace/program keys and cannot be used to match components.

Tilco

Programming the Remote Head Part of Honda OEM Keys (or vehicles it does not do automatically during Key programming)

ON BOARD PROCEDURE	HELPFUL HINTS
1) Sit inside the vehicle with all doors closed.	You must complete each step within 5 seconds.
2) Insert the key and turn it to the ON position. Press the Lock button on a unprogrammed Remote Head key.	HAVE ALL REMOTES HEAD KEYS READY, ALL PREVIOUSLY PROGRAMMED RHK ARE ERASED
3) Turn the key to the OFF position. Turn back ON the key a 2nd time and press the Lock button again.	
4) Turn the key to the OFF position.	
Turn back ON the key a 3rd time and press the Lock button again.	
5) Turn the key to the OFF position.	You must use the same Remote each of the 4 times
Turn back ON the key a 4th time and press the Lock button again.	
You should now hear and see the door locks cycle once. Keep the key turned ON.	
6) Press the Lock button on each Remote Head you want to program into the vehicle.	
You should now hear and see the door locks cycle once.	

Please note: We have included this info because we want you to know what needs to be done in order to program the RKE part of factory OEM remote head keys on some models where the RKE part may not program in automatically along with the transponder key programming. Having said that, our tech support does not as a rule support on-board procedures. Please consult with a dealer source to verify correct OEM factory part numbers and or procedures if the above info does not work.

MORE INFO:

You must program at least 1 E-KEY.

If all keys are lost the first step is to cut & program E-KEY/S

This will use a token.

This first step requires the A or the D dongle (see apps guide.) and all E-KEYS you want to program should be done in one step.

IF ALL PROX ARE LOST -

Program at least 1 PROX (up to 4 total.) This will use a 2nd token.

This requires the N dongle and all PROX you want to program should be done in this second step. The car will run with just an E-KEY but if the customer wants the PROX to work you must complete the Prox programming.

MVP USERS: Because Prox Keys are done in TWO separate procedures complete PROXIMITY KEYS will use at least TWO tokens.

1/100

RL PROX - TWIST KNOB SYSTEM

Components / Overview

MVP User's Notes on RL:

- You must program at least 1 E-KEY & up to 4 total. If all keys are lost the first step is to cut & program E-KEY/S

-Programming E Key/s will use a token.

-This first step requires the A or the D dongle (See KEY GUIDE SECTION.) All E-KEYS you want to Program should be done in one step.

IF ALL PROX ARE LOST -

-Program at least 1 PROX & up to 4 total.

-Programming the prox section of the key will use a 2nd token.

-Prox programming requires the N dongle and all PROX you want to program should be done in this second step.

If you just need to get the car running the car will run with just an E-KEY but if the customer wants the PROX to work you must complete the E-Key and the Prox programming.

Tilco

RL PROX - TWIST KNOB SYSTEM

Use this method to PROGRAM PROX (Use when ALL PROX lost)

Use the main OBD Cable Check the application chart for correct dongle to use.

Make sure you have at least 1 programmed E-Key to use before starting RL prox programming. (You may use the same E-Key during these procedures to program in multiple Prox.)

ADC-116 THE "INSURANCE" TOOL

Some cases of internal damage to the Device have been traced to a radio wiring fault on Audi / Volkswagen vehicles.

Audi / Volkswagen cars from 1997 onwards have the ability to code/fault code read the radio and therefore the diagnostic wire or K line that is used to connect all of the control units on the car (including the immobilizer) goes to the radio. If an aftermarket radio has been fitted, it is possible that this "K" line may have inadvertently been shorted to 12volt by the after-market adapter harness. This will not cause any running faults etc with the vehicle, but when you come along and plug in your Device it will fail to communicate and can end up permanently damaged.

To test for this problem on vehicles later than 1996, use a multi-meter to carry out the following:

Measure the voltage on pin 7 relative to Ground with the ignition and radio on, if it's below 9 volts then you are OK to connect the Device, if it is 12 volts you will need to wire a bulb up between Ground and pin 7. If the bulb does not illuminate it is OK to proceed with the Device, however, if it illuminates then you have a wiring fault to the radio Do Not Connect The Device!!!

4 = Ground 7 = "K" Line 15 = "L" Line 16 = +12volt

Use the ADC-116 OBD2 Socket Voltage tester.

Available from your A.D. USA Distributor

Advice on VAG from the Tech Support Desk

Verify the Make, model & year yourself, do not rely on Customers to say what year their vehicle is.

Use the 10th placement of the VIN (from left to right) to verify the year, yourself.

If there's a working key be sure to start the vehicle to check that it runs properly & visually inspect the dash for any solid lights e.g. airbag light or any check engine lights, ABS lights or other warnings.

Be sure to ask the customer about any known history of recent repairs, accidents, theft attempts etc.

Add extra power to the car during programming.

Even if the cars battery is in good spirits there just not enough juice to be successful on Pin Reading and or Key Programming with VW/AUDI

On most VW Audi, If you do not have the PIN number to the car - you cannot add keys to the car. Some vehicles you can read the PIN number from the car's computer and some you can't. Be AWARE of this when you take on a job. Audi-VW dealers & or NASTF cannot provide VW AUDI Pin Codes so the only way to program keys to these cars is to READ the PIN CODE directly from the car, when possible. When this works it's magic when it doesn't well, not so much.

We cannot guarantee success on all vehicles as many vehicles vary depending on country of manufacture and specification for the Dash Board & ECU Software versions.

Programming Audi's & Volkswagens is a RISK since there is no sure way to know whether or not "Reading" the PIN Code will work. However, on models listed in the KEY-LOOK Guide Success is very probable.

Audi/VW pin read & Key programming:

Some locksmith's avoid key programming for Audi/VW vehicles. We believe this is a mistake because they can be very lucrative jobs. However, like anything else one must have a basic understanding of what to look for and how to do the work properly. Our goal here is to give you the "How to knowledge".

First off all 2000-2009 Audi VW transponder based vehicles require a PIN CODE to program the keys.

If you do not have the PIN number to the car - you cannot add keys to the car.

Some vehicles you can read the PIN number from the car's computer and some you can't. Be AWARE of this when you take on a job. Audi-VW dealers cannot provide these codes so the only way to program keys to these cars is to READ the PIN CODE directly from the car, when possible.

We cannot guarantee success on all vehicles as many vehicles vary depending on country of manufacture and specification for the Dash Board & ECU Software versions.

Programming Audi's & Volkswagens is a RISK since there is no sure way to know whether or not "Reading" the PIN Code will work. However, on models listed in the KEY-LOOK-UP Guide Success is very probable.

Secondly, if an unprogrammed key is used to turn on the ignition too many times, or if an incorrect PIN CODE is used to try and program the Immobilizer also referred to as the "dash" will "LOCK" meaning that even if a correct PIN CODE is used the Immo cannot be programmed & "ACCESS DENIED" will be displayed on the tester.

The only thing that "Unlock a "Locked" Immo is time, with the ignition turned "ON" with good battery voltage on the car and the engine NOT running.

If you have a working key use that to read the pin, the reason being is to avoid dash lock time. If there's no working key then cut a metal key first to read the PIN CODE. Also use the metal key to verify if it's a transponder based vehicle, some Audi/Vw vehicles are transponder optional. Using the KEY LOOK UP GUIDE is essential for success and remember, Nothing in the USA is transponder PRIOR to model year 2000. There are several models from 1997-2000 that have a Megamos 48 chip in the key but are not transponder equipped so don't rely on the key alone as verification.

It's best to wait until you have successfully extracted a pin number and verified that no parts have been changed on the vehicle before cutting an expensive transponder key. Also, remote start systems, aftermarket radio's (please refer to the coming pages of this manual in regards to aftermarket radios) also, keep in mind, aftermarket alarms can cause programming issues.

All keys must be present for key programming or they will be erased during the programming procedure.

If you have 1 or more existing keys and wish to program additional new keys, the existing keys will become new again, to the vehicle, during the programming procedure and must be programmed with the other keys.

Keys before 2006 model year are not PRE-CODED meaning that a generic virgin transponder can be used.

Keys after 2006 or so start to require a VIN specific coding called PRE-CODING, this means the key must be ordered by VIN or produced by a process of PRE-CODING before it can be programmed. See the KEY LOOK UP GUIDE for specific vehicle guidance on this.

Advice on VAG from the Tech Support Desk- Cont'd

Audi/VW vehicles need power...lots of it!

Be sure to hook-up jumper cables or at least a jump pack to the vehicle before attempting pin reading and/or key programming. It's advised that after reading the pin you disconnect your tester and wait 30 secs before hooking back up to program keys. At this juncture hook-up extra power if you have not done so already for the pin read.

All keys will be erased during key programming so be sure to have all the keys that will be programmed to the vehicle on hand. You will need to select the total amount of keys to be programmed when prompted by your tester. If for example the vehicle has 1 working key & your customer wants 2 spare keys the total entered will equal 3. Use the key count information to your advantage by checking the key count before and after programming keys.

Many customers in an attempt to save money will want you to use Internet purchased keys. 9 out of 10 times these keys have no chip, the wrong chip or a locked chip and will not program in. Use a cloning device to check their keys. Explain the pit falls of Internet keys, suggest and/or insist (depending on your policy) upon using keys cut from your stock. However If you do decide to accept customer purchased keys I would strongly recommend you get paid for your time no matter what the outcome.

Also, if you're using a token based tester please don't expect AD to be responsible for lost tokens when trying program these keys.

It's important to note that after you program your key/keys the security light must go out. If for example the vehicle runs but the light blinks than the keys are not truly programmed in.

Check your key count and try programming in just the original key by itself. If the light goes out with the original key than most likely you have a spare key that's either locked, has the wrong chip or no chip. After successfully reading the pincode the following steps should be taken before attempting key programming.

1) Add Extra power to the vehicle in the form of jumper cables.

2) read & clear fault codes.

3) Take a little extra time to check the security info for any possible dash lock time.

If the vehicle has lock time, which reads in minutes, it will deny you access to key programming, even with a valid pincode. Lock time needs to be cleared by leaving the key in the on position for the stated duration of time, full battery charge. You don't have to keep your tester plugged in if you have other work to do.

Lets say for example the lock time reads 48 minutes and you have left the key on for that time period but the lock time still reads 48 minutes.

Try your pin anyway because most of the time it has actually zeroed out.

Pincodes for non-can vehicles are 4 digits. Can vehicles are 5 digits. If you pull a pin on a non-can vehicle using the below procedures and it reads 5 digits with a ZERO in the first digit (IE 01234), drop the ZERO and enter just the last 4 (IE 1234).

If you attempt to use a pincode for key programming that's not valid be sure to turn your tester off and cycle the key off and back on in order to avoid dash lock time. An invalid pincode will give you a message that reads "access denied" on your tester.

Engine Codes

In many cases a good way to identify what system is fitted to Audi & Volkswagen's is to have the Engine Code to the vehicle. Sometimes We list an engine code to use in place of the actual engine code on the car in the Key Look Up guide, use what we suggest whenever possible.

When needed the engine code can be found in different places on the vehicle. Look for a sticker in the trunk wheel well area or in the service booklet.

Many engine codes can be found on the next several pages to simplify the process.

Once you do locate the engine code - either on the vehicle or from the list here, you will need to Read the PIN code from the car and program the keys.

If you cannot read the PIN code or the engine code is not listed on the Pro tester than you will not be able to program the keys to the vehicle.

Advice on VAG from the Tech Support Desk- Cont'd

Always refer to the Key Look Up guide but here are a few quick vehicle specific system tips:

03-05 1/2 Jetta

Pincode reading procedure for vehicles listed in the quick reference guide below as EMS pin read;

Select Volkswagen (beta software)>Beetle >Engine code BDC>Read EMS.

For key programming go to Beetle>Type 2>Program keys.

00-01 Jetta

Pincode reading procedure for vehicles listed in the quick reference guide below as AUTO pin read;

Select Volkswagen>Select Golf/Bora/Jetta>Select 2nd choice down, which is 1J-1E>Select Plus read pincode>Select AKL>Select Auto>Select Smc or webcode >Select vag dashboard pincode read>Next choice is ECU ID or Special functions, select special functions>Select read pincode>2 possible pincodes will be next, select enter & another 3 possible pincodes will appear giving a total of 5 possible pincodes.

Eliminate any pincodes that include letters.

Key programming under vag immo system 2.

00-01 Beetle

Pincode reading procedure for vehicles listed in the quick reference guide below as MM5; Select:

Volkswagen>Beetle>pin read>Go to the end of the engine code list, select Magnetti Marelli to get the

MM5 pin read. If MM5 gives a failure message, then go to MM4 and then back to MM5 for a second attempt.

Program keys under vag Immo Type 2

05 Beetle

Magnetti M>Beetle MM5 05> then type2)

Program keys under Immo Type 2

02-05 1/2 A4

Pincode reading procedure for vehicles listed in the quick reference guide below as BAA; Go to Audi> A4>pin reading>select the engine code BAA. Program keys under vag immo system 2.

02-05 Passat

Pincode reading for gasoline engines use Toureg BAA or Beetle BDC, one should work depending on what engine is installed.

Program keys under vag immo system 2.

	Light should be out at en	d of procedure.
TIPS:	If theft light blinks or com	es on steady the key/keys have not
Make sure when PIN READING on these systems that you are retrieving a 5 DIGIT PIN number.	been accepted.	
Make sure you have the correct transponder and if intro- ducing new keys they cannot be already used (locked) from another vehicle.		
KEYS HAVE WHAT VW CALLS "COMPONENT PROTECTION" EACH MODULE IN THE CAR HAS AN ENCRYPTED VERSION OF THE VIN STORED INSIDE IT AND THE KEYS HAVE TO HAVE THAT SAME ENCODING ON THE TRANSPONDER OR THEY CANNOT BE MATCHED / PROGRAMMED		
Some but not all 2006 do not have the component protection activated and will accept a HU66T24 without Pre-Coding. The component protection is there but just not activated. Go figure, VW likes to play "hard to get"		
One way to tell seems to be if when reading the PIN the PIN starts with example 02345 then there is no com- ponent protection. If the PIN starts with something else for example 52345 or 92345 then the key requires the Pre-Coding.		
2007-2010 will require VIN Pre-Coding.		
MORE INFO:	·	

USING THE ADC-222 & SMART AERIAL TO PRODUCE A PRECODED TRANSPONDER.

WARNING: The ADC-222 is intended for use on USA 2006-2010 BEETLE models ONLY.

Do not use the ADC-222 if any electrical modifications have been made to the vehicle or if the factory radio has been replaced with an after-market radio.

1. Start by hooking up to the cars OBDII port with the ADC-222 inserted on the end of the ADC-250 or 251 Cable.

2. Connect the Smart Aerial to the Smart Dongle.

3. Flipping the switch on the ADC-222 will electronically turn the ignition on which will apply power to the vehicle immobilizer and main ECU.

4. Now go to PIN READING and use BPR or BPS for 2006-2010 Beetle. You should be able to read the PIN CODE and PRECODE info. Write down the PIN. the SD should save the PRECODE DATA but it's a good idea to write that all down too.

5. If all 7 bytes of PRECODING can be read immediately the software will allow you to PRECODE a key using this data. If the 7th byte is unknown then the software should ask if you want to search for the missing byte value. To do this use a virgin HU66T24 key.

A. Place the key thru the + in the SMART AERIAL and then insert the key all the way into the ignition. As far as it will go and so it is holding up the AERIAL.

Leave the mechanical igntion itself in the OFF position. Remember, for this part the ADC-222 is in place and has the igntion system powered up. This process can take up to about an 1 hour so be patient and make sure the vehicle battery is kept up by using external power such as jumper cables.

B. Once the software finds the missing 7th byte value it will alow you to write to the transponder and lock the chip and if you want to creat more transponders.

6. Once you have completed the above steps disconnect the ADC-222 and reconnect without it to finish off by programming the transponders you have prepared., and or any other keys

Chrysler SKIM Functions for Type 1 & 2

The SKIM (Sentry Key Immobilizer Module) is located in the antenna ring. The antenna ring is what surrounds the ignition lock and makes the data exchange between the transponder chip in the key and the SKIM.

On some occasions, it may be necessary to replace the SKIM because of damage to the SKIM and the ignition lock due to a theft attempt. There are some cases of SKIM failure, resulting in replacement of the module.

TIPS:	WATCH VIDEO -	-			
Verify vehicle is non-transponder based	PROGRAMMING RKE KEY				
(starts and runs with a metal key) before	2005 NON-TRANSPONDER				
using these instructions	DODGE DURANGO				

MORE INFO:

These special instructions are only for certain CAN vehicles that have a SKIM but do not require a transponder to start the vehicle. Once you have verified by cutting a METAL key that the car starts and runs, USE THESE INSTRUCTIONS. Even though they do not require a transponder they still have a PIN number.

Unlike most other REMOTE systems, these use TOKENS to program if using MVP PRO.

CAN stands for Controller Area Network and is just an acronym to describe the system. It does NOT stand for CANADA

1/100

CAN Non-Transponder

Use this method to **PROGRAM REMOTE HEAD** KEYS (NON-TRANSPONDER VEHICLES ONLY)

Once you have verified by cutting a METAL key that the car starts and runs, USE THESE INSTRUCTIONS.

2004-2006	DURANGO	CAN 1
2007-2009	DURANGO	CAN 4
2005-2011	DAKOTA / RAIDER	CAN 1
2012-2013	DAKOTA / RAIDER	CAN 4

ON THE ABOVE LISTED MODELS:

Try using a non-transponder key to start the vehicle. If the engine starts and runs then you have a non-transponder equipped model. These use a REMOTE HEAD KEY. The same part is used as on the transponder model. The RKE buttons are programmed using this method. PIN CODE IS REQUIRED.

Select: +CHRYSLER +BY SYSTEM +IMMOBILIZER

NEXT: SELECT THE SYSTEM WE LIST ABOVE. IE CAN 1 or CAN 4

1) Sit in driver's seat.

2) Make sure all doors are closed.
3) Put seat belt on.
4) Make sure there is nobody else in the front seats.
Once you enter remote programming a chime will be heard. the screen will display the number of KEYS programmed , in this case KEYS = REMOTES.

TO ERASE REMOTES (if required) use ERASE KEYS function.

SWITCH IGNITION ON

(use any key to turn the ignition on)

FOBIK IMMOBILIZER WITH OPTIONAL KEYLESS GO SYSTEM

WATCH VIDEO - 2013 TOWN & COUNTRY WITH KEYLESS GO

FOBIK IGNTION BEHIND THE REMOVABLE BUTTON

Chrysler / Dodge "Keyless GO" proximity systems was first introduced on the 2009 Dodge Challenger as optional upgrades. Then expanded on to the 2011-13 Dodge Durango & Jeep Grand Cherokee.

These vehicle have a removable "Push to Start" button. The button (shown above left) snaps into place and is easily removed to expose a Fobik ignition switch hidden behind it. (Shown above right)

When the proximity Fobik remote is recognized inside the vehicle - the driver can press on the brake pedal and press the "Start" button to start and stop the engine.

Fobik KEYLESS GO proximity remote's are programmed just like other Fobik remote's by inserting them into the Fobik ignition switch and programming them using the same procedures used on other FOBIK systems.

On the Keyless Go system anytime any programming procedures are performed on the FOBIK keys there is a matching function called "MATCH KEYLESS GO" on the menu that must be performed as a last step after programming all keys.

This function enables the PUSH TO START button to work.

Without performing this function the FOBIK keys will only function by inserting the keys in the ignition with the button removed. The matching is always performed last and after any keys are added or deleted. Once this function is completed the Fobik keys will operate as PROXIMITY keys. allowing the vehicle to start with the "Start" push button installed.

1/100

FOBIK IMMOBILIZER WITH OPTIONAL KEYLESS GO SYSTEM

Use this method as a final step on "Keyless GO" Systems Perform this as a last step after programming the FOBIK the same way as any other FOBIK system. This final step is needed to make the KEYLESS GO function work.

DODGE DART & RAM PIN READING

Use this method to READ THE PIN CODE on 2013+ DART / RAM

Requires Smart Dongle and ADS234 Software on T-Code Smart Dongle and 1 token on MVP Released on V12.96 or higher make sure unit is updated before attempting.

START HERE:

Select: +DODGE + NORTH AMERICA +BY VEHICLE +RAM OR DART (Pick the one you are on) +2013 +SKIM READING

HAZARDS ON / IGNITION OFF

PRESS ENTER KEY

ECU IDENTIFICATION

VIN: 3C6TRDT3EG30135B
Part No : 68213675AF
HARDWARE No. : OD. 1201.

READ PINCODE

PINCODE : 7070 EXAMPLE ONLY!

SWITCH IGNITION OFF

PRESS ENTER KEY

SUCCESS! Here we see the PIN CODE has been read and displayed.

Switch the Ignition OFF and then back off before going to IMMOBILIZER.

DODGE DART & RAM PIN READING

TROUBLESHOOTING

If the PRO is unable to READ the PIN CODE this may be an indication of a deeper vehicle releated issue.

POSSIBLE PINCODE-

If the Pro is unable to auto-identify the SKIM part number and PIN CODE you will get a message like this.

While the software is extremely powerful and should be successful on covered/listed vehicles in some rare instances YOU MAY BE HAVE TO RESORT TO GETTING THE PIN FROM THE DEALER OR NASTF.

Please report any Pin Reading issues:

If at all possible please send a pic of the screen and include the VIN # and actual pin to john@adusa.us

We will use this info to improve the Skim Reading Software

2003-2006 DODGE SPRINTER

GENERAL INFO

"Start Error" will be displayed on the dash if the key in the ignition is not programmed or recognized because of a problem with the immo system such as a damaged antenna ring etc. This will also be displayed during the key programming procedure whenever a new key is being introduced.

Important Facts to Know:

A) "Start Error" will be displayed on the dash if the key in the ignition is not programmed or recognized because of a problem with the immobilizer system such as a damaged antenna ring etc. This will also be displayed during the key programming procedure whenever a new key is being introduced.

B) When adding a key, it is important to start the procedure with an already programmed key. If not, a second key will <u>not</u> be programmed and any programmed keys are locked out. The only way to correct this is to start over using "Program Keys" (erases all previously stored keys and programs the key in the ignition). It will still say 1 key programmed but your already programmed key will no longer work

C) If erasing, the same key stays in the ignition throughout the procedure. If adding a key, the process is started using a programmed key and the when asked to turn the ignition back on you use the new key being programmed.

D) You must wait 3 minutes before programming another key.

E) When programming a factory remote head key, the buttons will program at the same time as the key. They will NOT be erased if keys are erased, old keys will no longer start the vehicle but they will continue to operate the RKE system.

F) After-Markets, like from SILCA, are designed for cloning. They will work for programming but only if they have info loaded onto the chip before they can be used.

G) If you have a working key and you don't need to have a remote head key, then CLONING is by far an easier option.

Advanced Diagnostics USA Manual for MVP & T-CODE - © 2017

Type 5 Remotes

2002 DODGE RAM PICK UP IDENTIFICATION

In 2002, Dodge had 2 different styles of RAM Pick-Ups. The new style which has door handles that stick out from the door use Remote Type 8.

The older style RAM Pick-Ups that have door handles that are flush with the door use use Remote Type 5.

New Style RAM Pick-Up

Mid 2002

Type 8 Remotes

The door handle sticks out from the door.

Old Style RAM Pick-Up

Early 2002

Type 5 Remotes

The door handle is flush in the door.

Type 5 Remotes ('98-'02 Dodge RAM Pick Up)

PROGRAM REMOTE

ENTER REMOTE NO. #

Note:

There are 3 memory positions for the Type 7 Remote system: 1, 2, & 3

Enter a number to fill a memory position for the remote you would like to program.

This will overwrite the memory location if there was already a remote programmed to that position before.

You can program the same remote into all 4 positions to erase other remotes if you want to.

Note: To program the remote-

Press the Lock & Unlock buttons together. Now press the Lock button once. You must act quickly!! When done press Enter on Device.

IMPORTANT: Model Year 2001 is split year - Overlapping immobilizer types & keys. Use the production date. Usually up to 07/2000 production date is PATS 2. After 07/2000 is PCM. (SEE BELOW)							
READ THIS BEFORE CUTTING ANY KEYS! Look at the existing original keys to the vehicle. If the original key is an H84 key, the system to use is PCM. If the original key is an H-72 key then the system is PATS 2. IF NO KEY IS AVAILABLE WE SUGGEST DOING THIS: Have at least 2 of each H72 and H84 Key Blanks ready but DO NOT CUT THEM YET. A. Cut and use only a metal non transponder work key. B. Using the PROD DATE (see above) use the system you "think it should be" based on the PROD DATE. C. Before doing any programming look at "KEYS PROGRAMMED" on the special functions menu. (should show at least 2 keys) D. Use "CLEAR ERASE PATS" and then look at the "KEYS PROGRAMMED" info again to see if the keys have been erased. (should now show 0 KEYS PROGRAMMED). If keys have not erased use the other system. IE PATS 2 or PCM. E. When you have determined which system will ERASE the keys you then will know which type of keys							
to cut. Now cut and cycle them in to F. If PATS 2 system then simply cut an	d cycle 2 H72	Keys. If PCM	system cut and	cycle 2 H84 keys	5.	μ

FORD 'BASICS'

"Special Functions"

- Keys Programmed
- Add Key (May not be available or usable on all systems, check the KEY GUIDE)
- Clear Erase Keys

Keys Programmed: This function will tell you how many keys are presently stored in the vehicle Memory and It's located on the same screen as "add key" and "clear & erase". Although it's an optional function on the tester and not mandatory **we highly recommend you look at this information first before adding or erasing keys.** The key count information can help solve and or avoid key programming problems.

Add Key: In order to add a key there must be a minimum of 2 keys stored. They don't have to be physically present, just stored in the vehicle memory. Adding a key can be accomplished by one of two methods. 1) Use the add key function on your tester. 2) If you have 2 working keys on hand you can add additional keys up to a maximum of 8 using FORD'S On Board Procedure. NOTE-The on-board procedure can be turned off via the dealer scan tool, this is a rare occurrence but one that you may run into. It's also very important to note that if you're using your tester to "add" a key to the system the key in the ignition must be the spare key you wish to program in & NOT an already programmed key that starts the vehicle. Please note that adding a key is never a given on any FORD. For example if the system reaches the maximum amount of keys (8) you will have to erase keys.

Clear & Erase Keys: Keys can be cleared from the vehicle system using your tester. Once all keys are erased the vehicle goes into "learn mode". In order to close the learn mode 2 keys must be cycled in (back to back for 5 secs each) and the security light must go out. Lets say for instance that only 1 key becomes stored and not the other, the vehicle will not run. However the learn mode will stay open indefinitely until the system recognizes & stores the 2nd key into the memory. Once the learn mode is closed you can add additional keys by using the add key function or FORD'S On Board Procedure.

How to Cycle Keys after an Erase Procedure;

Once the system reads "0 Keys" disconnect the tester.

Take the first key out of the ignition and reinsert it, turn it to the on position for 5 seconds. The theft light should go solid indicating it's stored the first key. Next insert your 2nd key and turn it to the on position for 5 seconds. The light should go solid for 1 to 2 seconds and go out, this indicates it's stored the 2nd key. On some of the newer 2011> systems you may hear the door locks cycle. The "keys programmed" information should now read "2 keys".

NOTE-if the vehicle is equipped with an aftermarket remote start system the erase key function will remove the remote start chip/key info from the system.

Pats 1 Info

There are only 2 functions on Pats 1 vehicles, "clear & erase" or "keys programmed". Since the Pats 1 system only requires one stored key in the memory to have a running vehicle the only time you need to use your tester is when all keys are lost. If you have a working key any additional keys are added in via an OBP. The tester will erase all keys stored in the memory and program in the key that's in the ignition. We recommend you first check the key count before selecting erase and after the 8 minute timeout is complete. The key count should now read 1 stored and there is no need to remove the key & cycle it in the ignition since it programs in at the end of the 8 minutes.

ICM, HEC, VIC, SCIL; On these older FORD systems it's recommended to wait 2 minutes after programming keys before testing them as it can take a few minutes before the keys will be recognized by the vehicle system. Even though the key count may read 2 keys stored If you try to start the vehicle.

FORD THEFT LIGHT BEHAVIOR , What to watch for....

The Theft (Security) light on a Ford product contains many clue's when programming keys into the system. The key must be turned ON.

THEFT THEFT THEFT THEFT THEFT

A Fast Blinking THEFT light will indicate that the vehicle is in ANTI-SCAN Mode or an un-programmed key has been turned ON.

THEFT THEFT THEFT (SOLID FOR 3 SECONDS)

A solid lit THEFT light for 3 seconds and then goes out completely will indicate the vehicle recognizes a programmed key

THEFT (STAYS ON SOLID)

A solid lit THEFT light that stays ON and does not blink or go out indicates that vehicle is in Learn Mode and is waiting for a second key to be programmed, simply insert another key to be programmed and turned ON. In some cases, inserting a second key will do no good if the vehicle is equipped with an after-market Remote Start device. You must disconnect the Remote Start device to finish key programming.

"Anti-Scan Mode"

• Most Ford, Lincoln, Mercury & Mazda (Ford based) models are equipped with a feature called ANTI-SCAN.

• ANTI-SCAN models include vehicles that use PATS 2, HEC, ICM, VIC, PCM & CAN.

This can sometimes be the main cause for a Ford product not starting after programming new keys or Clear/Erase of keys.

Follow this procedure if the vehicle will not start and the you have cycled your keys after Clear/Erase has finished:

1) Disconnect the Device and remove any keys.

2) Wait 2 minutes.

3) Turn the first key to ON (Do not try to start) - the Theft light should stay on for 3 seconds and then go out.

4) Repeat this for the Second Key. If the Theft light stays on for 3 seconds and then goes out, you are not in ANTI-SCAN mode and the vehicle should now start.

• You will not be able to start the vehicle with an un-programmed key and even an original key if you have not waited 70 seconds after removing the un-programmed key.

• In some cases you may need to leave the programmed key in the RUN position for 2 minutes and then turn the key OFF and back ON to start the vehicle.

5 tips that will help to make key programming go smoothly on Ford vehicles.

Tip # 1:

Check the application guide in this manual or online at <u>www.adusa.us</u> for the proper system selection & key blank information.

Tip # 2:

Form the habit of turning the key to the "ON" position before hooking up to the OBD2 port on FORD systems.

Tip # 3:

Use jumper cables from your vehicle to the vehicle you're working on because 10 minutes is a long time to have the key on! This will help to eliminate possible "failure to communicate" issues.

Tip #4:

Get in the habit of reading & clearing fault codes before doing any key programming. Sometimes the fault codes will show you something is wrong with the system. I.E. "SCP mismatch" tells us the system may need a parameter reset.

Tip #5:

Always look at the amount of "keys programmed" before doing anything to the system. The reason to always do this is to eliminate any guesswork.

For example: When "Adding" let's say you see "keys programmed" says "2 Keys", now run through the "Add key" procedure and after completing It reads "3 keys" but the vehicle does not start? Based on the "Keys Programmed" info, the key is in fact programmed.

Check the car, it may be in anti-scan mode or maybe something has been changed by a mechanic? Perhaps it needs a "parameter Reset".

Let's say it still shows, "2 keys" programmed. Clearly ADD-KEY did not work. Maybe you are using a bad chip or the wrong key blank (chip) or perhaps the wrong system was selected?

Lets say you look at "keys programmed" and you see "3 keys" then go through the CLEAR/ERASE KEY key procedure. After cycling keys you now see "2 keys" We now know they are your 2 keys because there were 3 before you erased.

Going further lets say "Keys Programmed" reads "2 keys" to start with & now you erase, you can check "Keys Programmed" before you disconnect and cycle keys and you should see ZERO keys, sometimes if check after cycling and it reads 1 Key Programmed. Try cycling the keys again. You could have a bad chip or bad antenna ring on the car. Remember, the system is not closed until you it reads

"2 Keys" with the exception of the Pats 1 system that only requires 1 key to close the cycle.

Unfortunately most users don't take advantage of this information and guess as to what is going on and worse - start going through unnecessary programming procedures to solve the problem they are having.

MVP & TCODE PRO FOR	D			
PATS 1 (Passive Anti Theft System 1) SCP (internal acronym for FORD)				
SPECIAL FUNCTIONS				
CLEAR KEYS - This function ERASES all keys from memory and programs the one key used during the procedure.	T-CODE SOFTWARE # ADS-100	CABLE / DONGLE: ADC-250 / ADC- 251		
On a PATS 1 system you must CLEAR PATS to program a key, if you have no existing keys.	MAX # OF KEYS:	SMART DONGLE?		
WAIT TIME should be 8 Minutes.	KEYS:	SECURITY:		
Make sure you have the correct type of chip key in the igni- tion.		COMPONENTS MATCHED?		
After the wait time, the key in the ignition will be programmed.		MATCHING CAPABILITY? Not needed		
<i>KEYS PROGRAMMED-</i> This function reads the number of programmed keys. It's always a good idea to use this to see how many keys are in the system PRIOR to and AFTER any key programming is performed. TIPS:	Light should be out at end of procedure. If theft light blinks or comes on steady the key/keys have no been accepted.			
After Programming wait a few seconds before testing keys				
MORE INFO: This was FORD'S first PATS system introduced into the USA back in 1996. It's called PATS 1 for this reason and also because unlike later FORD systems it only requires a minimum of 1 key to be programmed into the system. ON BOARD PROGRAMMING (OBP) - Only 1 programmed key is required to OBP a 2nd key into the system. If you have 1 programmed key to add additional keys is very simple: A. Cycle the programmed key On for 5 seconds then OFF. B. Within 10 seconds, cycle a NEW key you want to program On for 5 seconds. C. Wait a few seconds. D. The NEW key should be programmed.

10 minute Bypass info

On the majority of the earlier FORD systems (Pro Only) you will be able to bypass the 10 minute security wait. For Mazda Can vehicles you will be able to bypass the need of obtaining a valid in-code, the tester software does this step automatically during the programming process.

All new MVP PRO's come fully equipped with the software and an activated smart card system so there's no need add anything. However if you own an older MVP PRO that doesn't have the smart

Card system, smart card will need to be purchased, registered and the software will need to be updated in order for the FORD MAZDA BYPASS to work. T-CODE PRO owners need smart card system enabled and the ADS-133 Ford/Mazda Can coded software in order to bypass Fords.

Basic steps required before using the bypass software.

- Look at the 10th placement of the VIN and not the production date for determining the correct year of
- the vehicle.
- Check the KEY GUIDE SECTION OF THIS MANUAL for the suggested system selection.
- Always check the key count using KEYS PROGRAMMED on the menu, before and after "adding" or "erasing keys".
- Add extra voltage to the vehicle even when you dont think it needs it. This is critical for success!

The smart card system will NOT actually be called for when you bypass. In other words, smart card just needs to be actively enabled to the PRO but the tester software will not ask for it to be used on the majority of the earlier Ford/Mazda vehicles. This is an obvious time saver.

TROUBLESHOOTING - BYPASS ISSUES

If the bypass of the 10 minute security wait doesn't go through on the first attempt stay connected and try again. If working on a PCM system and the bypass doesn't work the first time switch to timed access by choosing to not use the bypass.

Pats 4 vehicles most of the time will require selecting Pats 5 or you will get an "invalid access code".

If using parameter reset on an HEC vehicle and are having trouble using the bypass use the timed version.

On Mercury Cougar vehicles, and some other early PCM vehicles only use the timed version.

On Jaguar S Type using the HEC system only use the timed version and only use ERASE KEYS. Mazda Bypass info:

OLD BODY STYLE-(HERITAGE)

Straight with no curve

HEC SYSTEM with H72PT KEYS

ADVANCED DIAGNOSTICS

Special Notes for a few select vehicles:

PCM SYSTEM FORD ESCAPE & MAZDA TRIBUTE

When you have finished programming keys on one of these vehicles, you may find the vehicle does not start and the "Theft" light on the dash does not light up.

This is a known "glitch" to us on these models, regardless of which programming tool you use.

To fix this, you must re-connect your MVP or TCODE and turn the key to the "Run" position as if you were going to program the key again.

Select Ford from the Main Menu and then select "PCM".

Select "Fault Codes" and then select "Read Faults".

Select "Clear Faults" (Whether any faults were found or not.)

Disconnect the MVP or TCODE and remove the key from the ignition.

The vehicle should now start up.

1997-1998 Lincoln MARK VIII -SCIL SYSTEM -Anti-theft system

The 1997-1998 Lincoln MARK VIII uses a module called "SCIL" to perform the PATS functions and many other functions within the vehicle.

The SCIL is an abbreviation for "Steering Column Ignition Lighting" module.

Part of what the SCIL module controls is also the "Anti Theft" alarm system which is separate from the PATS functions. There is an indicator light on the dash that also displays the words: ANTI THEFT.

The Anti Theft system can be activated by the circuits and/or switches of the Anti Theft system which are located in the SCIL module and the Drivers Door Switch, Passenger Door Switch & Hood Switch.

The problem is that **NO** keys can be programmed until the Anti Theft system has been deactivated.

The problem may be as simple as fixing the hood switch. You may have to disassemble the doors to determine if the there is a faulty lock alarm connector switch.

The factory diagnostic tool called the NGS can help determine the problem. Use the Service Card, turn the ignition switch to Run, "Service Bay Functions", select "SCIL" and then select "View Alarm Event Data". If you see a "Yes" next to any of the circuits - that is where your problems exist and must be repaired.

However, there can also be a problem in the SCIL module itself.

At some point this level of diagnostic investigation may not be worth your time depending on your customer and his or her ability to pay you for this type of work.

You may be better off sending the customer to the dealer via a tow truck!

Next check the tailgate to determine if it's a Super duty or not. If it is it's Super duty it will clearly be stamped on the tailgate.

MORE INFO: CONTINUED

Factory alarms; Most 2011+ F SERIES trucks come equipped with a parameter factory equipped alarm system. If you are working on a lost key situation and the factory alarm has been tripped You MUST shut this system down prior to programming keys or you will receive an access denied message at the end of the 10 minute security wait.

Keys; 2011+ F series trucks require 80 bit keys. These keys are typically stamped with an SA or HA on the blade. Be sure you are not to be using the older 599114 key also known as the jewel key. NOTE-80 bit keys can be a used as a replacement for the 599114 key but not the other way around. If you are using remote headed keys the RKE functions will program in at the same time as the keys. NOTE-Be sure to cut a metal key first to verify the vehicle is transponder equipped as some vehicles may not have come transponder equiped.

Security light; There is no familiar security light on these vehicles, when the key programs in the door locks will cycle up and down once, on the no frills version of these trucks the locks will NOT cycle so you will need to rely on your key count info and the fact that the vehicle starts after the programing is complete.

Starting system fault message on the dash; If you program in a non-remote head key you will see a starting system fault message displayed on the dash, this is normal and will not affect the proper running of the vehicle. This message will extinguish after a short period of time but will reappear each time this key is used. Be sure to inform your customer that this is part of FORDS system when a non-remote head key is used to start the vehicle.

On Board Programming of Remotes - There may be rare occasions when the manufacturers OBP will not work, and you just can't get a remote to program. This is a known FORD issue that AD tech support can not solve for you. Sometimes the tire pressure module goes bad, which is the same module related to the OBP being successful. If this happens the module may need to be replaced.

ALL KEYS LOST SITUATIONS IF YOU SET OFF THE ALARM IT NEEDS TO BE RESET BEFORE YOU CAN PROGRAM KEYS

The tester will display "ACCESS DENIED"

2011+ model factory alarms will not reset simply by turning the key in a door lock.

SOLUTIONS:

There are 2 ways of re-setting the alarm to allow for key programming:

 Program in a 3 or 4 button separate remote like the ones shown below. (Use the on-board programming instructions on the next page) Then use the remote to disarm the alarm.

2. Read the key-pad code (if the car or truck is equipped with one) and then use the door key-pad to disarm the alarm.

HELPFUL HINT:

If your doing lost keys on these vehicles It's a great idea to have a few of these remotes on hand so you're ready for this and wont get stuck needing one because of the FORD ALARM.

VEHICLES THAT MAY REQUIRE ON-BOARD PROGRAMMING METHODS FOR PROGRAMMING REMOTES

ON BOARD STEPS #2 (Used on Fiesta) For On-Board Programming a Remotes: 1 Turn the ignition switch from off to run four times in rapid succession (within six seconds), with the fourth turn ending in off. If the program mode is successfully entered, a chime will sound. Note: If no action is taken within 10 seconds after a transmitter has been programmed, the programming sequence ends. 2 Within 10 seconds, press any button on the transmitter to be programmed. A chime will sound to confirm that the transmitter is programmed. Repeat this step for each transmitter. Note: There is no chime or any other confirmation upon exiting the programming mode. 3 Exiting the programming mode is accomplished if one of the following occurs: • The ignition is turned on. · Ten seconds have passed since entering the programming mode or since the last transmitter was programmed. The maximum number (eight) of transmitters has been programmed. 4 Within 20 seconds, press any button on second keyless remote. Door locks will cycle again to confirm programming.

ADD KEYS

SUCCESS READING KEY / STORING KEY KEYS PROGRAMMED : 03 Do not let this message confuse you. Even when just ADDING A KEY this message will show up. All it means is that there must be at least 2 keys PROGRAMMED IN MEMORY for the car to run. If you are ADDING A KEY and there are 2 keys already programmed you only need 1 key with you to ADD.

A timer should run showing approximate time elapsed.

Be certain to remain connected to the vehicle and that good battery charge of at least 12 Volts is maintained!

Once the SUCCESS message appears cycle the key in the ignition to "OFF" then back to "ON".

KEYS PROGRAMMED : Should display the new number of keys programmed.

Disconnect the tester & test the keys.

2012-2015 FOCUS, ESCAPE / 14-15 FIESTA / 14-16 TRANSIT CONNECT KEYED MODELS

REMOTE FUNCTIONS

IF YOU ARE PROGRAMMING REMOTE HEAD KEYS ON THESE MODELS SOMETIMES THE RKE BUTTONS MUST BE PROGRAMMED IN USING ONLY THE CAR, NOT THE PRO.

This is done via an "On-Board Programming Procedure" - Here's how to do it-

1. Close all doors and fasten the seat belt to ensure conflicting chimes do not sound during programming.

2. Turn the ignition lock form OFF (2) to ON (3) at least 4 times in 6 seconds.

3. Switch off the ignition. Now the RKE control module has entered the "learning mode" for 10 seconds. This mode is indicated by a chime.

4. While the RKE control module is in the "learning mode", press and hold one of the buttons of the remote transmitter until a chime sounds. This indicates a new RKE has been successfully programmed. Now, another 10 seconds "learning mode" is automatically entered. Another transmitter can now be programmed (repeat step 4).

5. The system will leave the "learning mode" after starting the ignition, if no new transmitter is programmed during the 10 seconds, or if the Max of 4 remotes have been programmed. After successful programming, only the new programmed transmitters will work. Note that an incorrect programming procedure dose not erase currently programmed RKE's.

6. Test all RKE button for proper functioning.

Parameter Reset Overview

A parameter reset procedure can sometimes be useful when a vehicle's instrument cluster or PCM module has been replaced and there is PATS MIS-MATCH situation. Sometimes a fault code like "SCP MESSAGE MISSING" will be a clue to this condition.

However, depending on where the parts came from they need to "re-flashed" with the proper vehicle information before they can be succesfully installed.

Please keep in mind that a PARAMET RESET may or may not solve any pre-existing vehicle issues that may be the cause of any "no start condition."

Please NOTE that AD cannot not refund any lost tokens used for parameter reset functions.

Here are a few helpful notes:

> ALWAYS check the 10 digit of the VIN number to verify the year of the vehicle, then check the PARMETER RESET COVERAGE GRID for the correct system protocol.

> Some vehicles are selected using BY SYSTEM & NOT BY VEHICLE & some get selected only BY VEHICLE.

>If the vehicle's instrument cluster is changed on a PCM or Pats 3 system vehicle, a parameter reset procedure may not necessary because the keys are stored in the PCM. You may only need to CLEAR/ERASE/PROGRAM keys to get the vehicle running again.

>It's always a great idea to check "keys programmed" before, during and after jobs. It's also a great idea to apply extra power to the vehicle during programming.

>Some vehicles may be listed as using one protocal to ERASE / CLEAR / PROGRAM keys in the KEY LOOK UP GRIDS but are listed as HEC in the PARAMETER RESET COVERAGE chart. This is because a PARAMETER RESET is accomplished by selecting HEC even though the keys programming uses another protocal (for example PATS2). You may have to CLEAR ERASE & PROGRAM 2 keys prior to a PARAMETER RESET depending on what was changed. This ensures that the keys used are actually stored in the vehicles memory. HEC/ICM/VIC protocal cars the key memory is stored in the dashboard so it's absolutely essential to do this if the dash is what has been changed.

> Sometimes, performing what's called a "Hard Reset" which is to momentarily disconnect the vehicles battery helps after performing PARAMETER RESET function to reset the vehicle computer memory or KAM. After re-connecting the battery cycle 1 of the keys in the ignition 5 times ON/OFF waiting 5 seconds during each ON cycle. This completes the KAM procedure. Wait 2 minutes prior to testing keys.

>If after selecting PARAMETER RESET an option appears to bypass the 10 minute security wait, say NO & instead opt for the 10 MINUTE WAIT.

keys.	Fiesta Prox can be done with just one token.		
MORE INFO:			

INITIAL ACCESS TIME-OUT

On intelligent access equipped cars after first plugging in and turning the PRO on with the "L" dongle connected

The car may need about 1 minute to respond.

This is normal, just stay connected and wait 1 minute or so before proceeding with programming.

INTELLIGENT KEY PROX MODELS (2 STEP PROCESS)

MORE ADDITIONAL INFO

Intelligent Keys (Except FIESTA) require 2 STEPS, 2 separate 10 minute procedures.

STEP # 1 with the "G" dongle programs just the Transponder inside the PROX key.

STEP # 2 with the "L" dongle programs the "Intelligent key" (RKE buttons & proximity).

TRANSPONDER - This deals with just the transponder inside the PROX and programs the transponder so that it works by holding the PROX up to the learning area on the column if the battery inside the PROX goes flat.

INTELLIGENT KEY - This deals only with the RKE buttons and the ability to use the PROX to start the car anywhere inside vehicle compartment.

Transponder Learning Area

The positioning is extremely important when programming the Transponder portion of the PROX.

The PROX must be held up precisely as shown here. We found that this is the best way to position the PROX for success.

Notice there are two types of columns: One has a round learning area the other has an indent. It does not matter which one the car has. The PROX should be held up the same way.

PROGRAMMING WHEN FACTORY ALARM IS ACTIVATED

- How to disarm the alarm so that you can program 2 PROX remotes.
- If there is a Door Key Pad and you have the code to it. (look in glove box for the code card) use the Key Pad to unlock the doors which disables the alarm.
- FORD, USA, By Vehicle, I.E. Mustang, +2015, Prox. Smart dongle screen or smart card.
- Follow the rest of the screen prompts until you get to the "Clear and program keys" OR "Additional Keys" if just adding a key. Leave the Pro on this screens and STOP there.
- Stay connected but DO NOT move forward because we need to deactivate the alarm. The solution is to put any prox in the reader slot under the cup holder and open the drivers door OR on Keyed Models leave the Key in the ignition with the ignition switched ON.
- This is were you will need to be patient because it takes approximately 10-15 minutes before you will hear 2 chirps from the vehicle.
- Once you have heard the chirps you can press the "Clear & program keys" screen and proceed with the rest of the programming.
- If you don't wait for the chirps that means your alarm is not truly deactivated and the procedure will fail to move forward.
- The T-Code / MVP Pro loops back to the Clear and Program keys screen.
- Be mindful that after you hear the chirps you have a 1 minute window to
- complete the programming before the alarm becomes active again.

RECENTLY ADDED INFO FROM TECH SUPPORT :

Known methods of shutting off the factory alarm when active for 13+ Fusion protocol vehicles.

If the vehicle is equipped with an active factory alarm it must be shut off before you can successfully bypass the FORD code via the MVP/TCODE PRO coupled with Smart Dongle. We are going to explain in detail the varies methods used to shut off the alarm. The below methods can be applied to any of the vehicles that require the 13+ Fusion protocol. 2013-17 Ford Fusion, 2013-17 Lincoln MKZ, 2015-16 Lincoln MKC, 2015-16 Ford Mustang, 2015-16 Ford F-150, 2015-16 Ford Edge, 2016 Ford Explorer.

1. To deactivate an active alarm select by vehicle & follow the screen prompts until you get to the "Clear and program keys" screen and STOP there. Stay connected but DO NOT move forward because we need to deactivate the alarm. Put any prox in the reader slot under the cup holder and open the driver's door. If it's a keyed ignition put the key in the ignition and turn it to the on postion. At this juncture you will need to be patient because it takes approximately 10-15 minutes before you will hear 2 chirps from the vehicle. Once you have heard the chirps you can press the "Clear & program keys screen and proceed with the rest of the programming. If you don't wait for the chirps that means your alarm is not truly deactivated and the procedure will fail to move forward. When it fails the T-code/MVP Pro loops back to the Clear and Program keys screen and same applies if using the dealer IDS tool, it boots you out of PATS functions after a second or two. 2. Some of these vehicles come equipped with a door keypad, for example the 2013-2017 Fusion & 15-16 Mustang. If you know the security entry code you can use it to deactivate the alarm system. The keypad code lights up vertically along the door trim located above the door handle. Most often the security code can be found in the glove box with the owners manual *NOTE-The keypad code can not be read by your MVP/TCODE PRO software.

3. If you are fortunate enough to be working on a rental account you may be in luck because they might be able to provide you with the Keypad code. They will either e-mail or print you a screen that they refer to as the "20 Screen". It displays the key code at the bottom of the page. On that page next to the key code, you will find an additional 5 digit number, which is your door pad code.

4. There is one other method of finding the keypad code but I warn you to only use it all else fails because it involves a bit of work & time. Located on the left hand lower inside wall behind the carpeting (drivers side of vehicle} is mounted what is referred to as the the smart junction box. There's a size 10 nut holding it in place. On the back of the Smart Junction Box is a white sticker that says "BCM Assembly" and on that same sticker is written "Keycode" with a 5 digit number. That's the keypad code to the vehicle. You can use a number 10 socket to loosen the nut enough to get a long reach mirror behind the box in order to read the code off the sticker. This is not a method to be used for the 2016-17 model years because there's a plate on the other side of the smart junction box that obstructs the view of the keypad code number.

2013+ FORD FUSION SYSTEM INCODE / OUTCODE -ALL MODELS (NEW PROCEDURE USING BYPASS & SMART DONGLE) KEYED MODELS

Use this method for: ADDITIONAL KEYS

FORD

Tilco

2013+ FORD FUSION SYSTEM INCODE / OUTCODE -ALL MODELS

- →You must have a valid NASTF locksmith ID (L.S.I.D.) and Password
- You must also have a valid username and password to the ADVANCED-DIAGNOSTICS.COM website. (Registration normally takes 2-3 days to process)
- Neb access is required live at the vehicle
- → Web access is required live at the vehicle.
- ➡A web enabled smart phone is "recommended" using AD Q/R reader.

Using the AD Q/R App will greatly reduce the amount of work entering the OUTCODE that is obtained from the vehicle, speed up the overall process of programming, and greatly reduce the possibility of user error entering the OUTCODE.

If you do not have the AD Q/R App you can use our website to enter the numbers manually but it will be much harder than using the Q/R App.

(This means they lock and **COMPONENTS MATCHED?** can't be re-used on another IMMO & PCM BCM ARE vehicle) MATCHED MATCHING CAPABILITY? NONE DEALER EQUIPMENT NEEDED TO MATCH COMPONENTS IF CHANGED **SECURITY LIGHT / THEFT INDICATOR:** Light should be out at end of procedure. If theft light blinks or comes on steady the key/keys have not been accepted. TIPS: MAKE SURE BATTERY VOLTAGE IS KEPT STRONG DURING THE ENTIRE 12 MINUTE WAIT. MORE INFO: At the end of the 12min car enters learn mode, turn the key OFF and leave it in the ignition, wait 15 seconds then turn the key to the ON position. At this point this key should be programmed and the learn mode is closed. USA market models- Requires only 1 key to close the learn mode. Only 1 programmed key is required to add additional kevs. Also, 3x10min on board programming without using diagnostics may be available.

Canadian market models- (look for Kilometers on the dash instead of miles in the mileage indicator) require 2 keys to close the learning and two programmed keys to on board program additional keys.

If you do not see a model listed in the charts that is because it uses an

ON BOARD PROCEDURE and does not REQUIRE the use of diagnostics to program remotes.

2014> SILVERADO / SUBURBAN / SIERRA KEYED IGNITION MODELS WITH SEPARATE REMOTE

PROGRAM REMOTE-

This procedure takes only a few seconds and DOES NOT require a PIN CODE.

It programs new remotes into the system and erases all old remotes from memory.

A maximum of 8 remotes and a minimum of 1 remote can be programmed into memory.

SELECT:

+GM USA +REMOTES +BY VEHICLE +CHEVROLET +SILVERADO +2014-2015

WATCH VIDEO - REMOTE PROGRAMMING ON 2014 SIERRA PICK-UP

FOLLLOW THE SCREEN PROMPTS. MAKE SURE YOU HAVE ALL REMOTES READY

GM USA

G. M. Remote Tips

WATCH VIDEO - 2005 CADILLAC CTS PROGRAMMING REMOTE

1) MVP Owners - No Tokens are used on GM RKE programming listed in this guide.

2) If you have problems getting a remote programmed check the battery on the remote.

3) Check that the vehicle battery voltage is at least 12volts.

4) Compare the part # and FCC ID to another working remote for that car if you have one. In some cases it may be necessary to open up the remotes and compare the circuit boards to ensur match.

5) Be sure you have the correct remote for the vehicle you are working on.

Sorry..ADUSA tech support does not provide remote part numbers by vehicle. Please check your distributor or dealer parts counter for part numbers.

6) Some vehicle listed here may not have an RKE system as standard equipment. If the car does not have a remote now it's possible that the factory system is not installed, and of course you won't be able to program a remote!

System Type Notes:

Type 4:

Use "Program Remotes" to "Add" remotes (up to 4 max.) "Erase Remotes" erases all remotes from the system. On some Type 4 vehicles it has been reported you MUST use "Erase Remotes" function FIRST or the "Program Remotes" function will NOT work.

Type 5:

Might have to start procedure with Ignition in "Off" position.

Type 7 & 8:

"Program Remotes" function can program up to 4 remotes at once. When initially communicating start with the ignition "ON" and then switch ignition "OFF" and select "Program Remotes" Now press and hold the Lock and Unlock buttons on each remote as prompted by the tester until the tester responds and asks if you want to program additional remotes.

When finished the tester will prompt you to cycle the ignition. Turn the ignition back "ON" then "OFF" and you are done. All previous remotes are erased. Use the "Check Remotes" selection to see how many remotes are programmed. Please note this feature also can show what button is being pressed on a remote. This feature works only with the ignition "OFF".

Type 13 & 14:

4 remotes maximum - program all at the same time. Hold Lock & Unlock 10 sec each. Be careful with "KO-BGT04A" FCC ID remotes used. The Part Number much be correct along with the FCC ID. They must both match or the remote will not program.

MORE INFO:	<u>.</u>			
The 1997-2001 Cadillac Catera is a modified version of t	he European made Opel			
An important note to remember is that the Catera model in the USA will need a 4-digit PIN Code to complete key programming. The PIN Code is usually obtained through GM dealers or N.A.S.T.F.				
If the wrong password is entered, the process is interrupted. After 3 attempts the ECU will lock and becomes blocked for 10 minutes, you must leave the key ON for at least 10 minutes to unlock the system.				
The Pin Reading on the PRO will work 90% of the time IF THE INTRUCTIONS ARE FOLLOWED but ONLY if a spare key has ever been programmed into the car.

+READ PIN CODE +BY VEHICLE

>FORCE IGNITION ON

NFXT:

Go back thru the same menu and select The cars ENGINE TYPE to attempt to read the PIN CODE.

ON GM PROX MODELS THE FIRST STEP

IF YOU NEED TO READ THE PINCODE IS **TO USE**

"FORCE IGNITION ON"

Select:

Next pick the make for example +BUICK

Then pick the model for example +LaCross Next pick the YEAR for example +2013-2015

For example: L4 2.0L (Gas 4 Cylinder 2.0 Liter)

PROX (PUSH BUTTON START) MODELS

ADS187 & ADS 223

PROCEDURE-EXAMPLE

Let's walk thru the steps necessary to program a PROX into a Cadillac XTS in a lost key situation when we do not already have the vehicles PIN CODE.

1. FORCE IGNITION ON - Select +GM USA, then PIN CODE READING, By Vehicle, XTS, and perform the FORCE IGNITION ON procedure. Once the dash turns on LEAVE IT ON.

2. READ PIN CODE - Select +GM USA, then PIN CODE READING, By Vehicle, XTS, and perform the READ PIN CODE procedure. This should give you the cars PIN CODE. Write it down, so you don't forget it! It will now be necessary to turn the PRO off and re-start the PRO.

3. PROGRAM PROX - Select +GM USA, then +IMMOBILIZER, +By Vehicle, XTS, and perform the PROGRAM PROX procedure. This is a guided process and the tester will walk you thru the steps. Make sure that a VIRGIN PROX is in the programming slot when you start. Carefully follow all the screens to completion. If you make a mistake and don't perform any of the steps you may have to start the process over.

FORCE IGNITION ON

SUCCESSFUL SWITCH AD100 PRO OFF

PRESS ENTER KEY

LEAVE THE IGNITION ON

TURN THE PRO OFF AND THEN BACK ON AND READ THE PIN CODE.

HYUNDAI & KIA SECTION

T-CODE SOFTWARE PACKS:

Hyundai & Kia USA (ADS-118)

Kia CAN (ADS-147)

Hyundai and Kia 2012 (ADS-196)

(Software names generally refer to the date of release on the T-CODE not the years of vehicles covered).

CAN stands for Controller Area Network, not Canada

HYUNDAI & KIA

Used Prox remotes for Hyundai & Kia, Prox keys that are not BRAND NEW (have been used on another car) cannot be re-used. There are lots of so-called "unlocked" or "re-furbished" Prox fobs being sold on the internet. Some can be good quality and almost like new but be very careful as you sometimes "get what you pay for".

> TOKEN WARNING: MVP will go all the way thru and use a token even if the Prox is not accepted. Brand new keys from a reputable dealer program in 100% without issue. Also, keep in mind, 2010 & 2011 models only accept 2 Prox max. Some 2013 models may accept up to 3 Prox max.

PIN Code required from Hyundai dealer or N.A.S.T.F. Canadian models only, US Models are non-transponder

Type 1

Used Prox remotes for Hyundai & Kia , Prox keys that are not BRAND NEW (have been used on another car) cannot be re-used. There are lots of so-called "unlocked" or "re-furbished" Prox fobs being sold on the internet. Some can be good quality and almost like new but be very careful as you sometimes "get what you pay for".

> TOKEN WARNING: MVP will go all the way thru and use a token even if the Prox is not accepted. Brand new keys from a reputable dealer program in 100% without issue. Also, keep in mind, 2010 & 2011 models only accept 2 Prox max.

Some 2013 models may accept up to 3 Prox max.

Or SD

PIN CODE CONVERTER FOR PRE-2007 MODELS

Use this method to USE THE PIN CONVERTER

>>>>USE CAREFULLY<<<<>>>>>USE CAREFULLY<<<<<

This Pin Code converter is only for vehicles made BEFORE 2007. Vehicles after 2007 require a conversion performed from the whole 17 digit VIN.

Also, older models listed as Type 1 use a fixed pin of 2345

PROX MODELS WITH A PROGRAMMING SLOT

Use this method to PROGRAM PROX

PROX MODELS WITH A PROGRAMMING SLOT

Use this method to PROGRAM PROX - Cont'd

YOU MUST HAVE A PROX IN THE SLOT HERE OR PROCEDURE WILL FAIL - SEE SLOT LOCATIONS ON NEXT PAGES.

> 6-Digit PIN is required. DEALER or NASTF

SECURITY CODE					
1 2 3 4 5					
6	7	8	9	0	

PROX PROGRAMMING

KEY PROGRAMMED

BACK' TO EXIT. ENTER TO PROGRAM NEXT KEY

IF YOU ARE PROGRAMMING MORE THAN 1 PROX REMOVE THE 1ST PROX FROM THE SLOT AND PLACE THE 2ND PROX IN THE SLOT BEFORE PROCEEDING.

PROX PROGRAMMING

PROCEDURE COMPLETE

PRESS ENTER KEY

IT MAY TAKE A FEW MOMENTS FOR THE SYSTEM TO ADJUST ITSELF AND FOR THE PROX TO START WORKING IMMEDIATELY AFTER PROGRAMMING

TROUBLESHOOTING

1. If incorrect pin code is entered 3 times immo will "LOCK". To unlock:

Prox models leave car alone with good battery charge for 1 hr then use correct pin code.

2. If "incorrect access code is displayed after entering pin code, immo is either "locked" or pin is incorrect.

3. Used keys (taken from another car) cannot be programmed. Procedure will go all the way thru and if using MVP will use a token. The used prox will not program and any prox in system will not be erased. Use only brand new factory keys from a trusted source!

MVP & TCODE PRO

PROX MODELS WITH A PROGRAMMING SLOT

HYUNDAI & KIA

PROX SLOT LOCATIONS

Kia Forte, Sportage, and Sorento and Hyundai Sonata (prior to 2014) Located inside center console.

Kia Magentis also uses a slot in the center console

Hyundai Genesis, built before 2014 the slot is located behind a door above the shifter.

Kia Optima (prior to 2014) and Soul and Hyundai Equus, the slot is located in the glove box.

The slot is a little higher in the Equus

Kia Borrego, the slot is located in the dash just below the Start /Stop ignition button.

Kia Rio, Sorento (lacking a slot in the console), Cadenza and Optima (2014 and on) and Hyundai Elantra, Veloster, Azera, Sonata (after 2014) and Genesis (after 2014) do not use a slot.

A PIN code is not needed for Infiniti-Nissan models using System 3 in the U.S.	want them to continue to start the vehicle. All keys are erased during this process and are considered "New" again and must be added back into the Immobilizer system.		
Some 1997-2000 Infiniti-Nissan models in the U.S. use a special OBD cable to connect to the vehicle's computer. This cable is supplied with your device.	YOU MUST TURN THE IGNITION ON TO POWER UP THE UNIT.		
We call this the "Old Style Nissan" cable.	n e		
The Old Style Nissan cable is used whenever you see this port. If you see the Old Style Nissan port and the standard OBD 2 port, always use the Nissan Old Style port.			
The Q45 has a port that is hidden under a black cover on the very bottom of the dash.			
The 1999 Infiniti I30 & Nissan Maxima have a port located in the Fuse Panel.			
The 1999-2000 Infiniti QX4 & Nissan Pathfinder have the port exposed on the very bottom of the dash.			

OLD STYLE PORT LOCATIONS

The Q45 has a port that is hidden under a black cover on the very bottom of the dash.

The 1999 Infiniti I30 & Nissan Maxima have a port located in the Fuse Panel.

ALL KEYED (BLADED) IGNITION MODELS WITH B.C.M.

A PIN code is **<u>needed</u>** for Infiniti-Nissan models using a BCM in the U.S. through 2002. This PIN code is the same (5523) on all current models through 2002.

IN 2003 Infiniti-Nissan started to use a random PIN code. This is done by converting the BCM (Body Control Module) identification number to a PIN.

Usually its possible to READ the label number using the PRO thru the OBD port.

On some early models listed on the following page this can't be done so the label needs to be looked at in order to read the serial number / label number.

The vehicle has a "BCM' unit.

This device co Operation is si (1)This device and (2)This de received. Include undesired oper	implies with Part ubject to the foll may not cause hi vice must accept ling interference to ation.	15 of the FCC owing two condi- armful interference any interference that may cause
RECIEVER FCC ID : K MODEL ID : IC : 21118-	BRTSTU50 TSTU50 TSTU50	電波 92LP0233
CONT BCM FLN002 SAE J1690 DOT	PART NO 284 NO 3YO NO 916	B1CG000
Calsonic Kans	ei Corp. MADE	IN JAPAN

The BCM (Body Control Module) allows the programming of keys and remotes into its memory.

The BCM has a serial number on it that can be converted to the PIN Code.

Usually its possible to READ the label number using the PRO thru the OBD port.

The BCM is usually located near the inside fuse panel, however it can be in digfferent locations depending on the model and year of the car.

MODELS THAT YOU NEED TO LOOK AT THE BCM LABEL

MODEL	YEAR	PIN	BCM / IMMU LOCATION	
G35	2003-2006	BCM LABEL CONVERTS TO PIN CODE		Next to Fuse Panel
M45	2006-2008			Use "Type 12" to "Read" BCM Code
MURANO	2003-2006		On BCM Box, Under Dash	
350Z	2003-2004		On BCM Box, Next to Fuse Panel	

350Z

BCM (Body Control Module) is located next to the fuse panel on the inside driver's side kick panel.

Example:

The 350Z BCM Serial number is "8A700" on this car and is right next to the barcode. Serial Number "8A700" converts to PIN "2164".

"2164" is the PIN you would enter using the MVP or TCODE.

FX35 / FX45 Next to the fuse panel on the inside driver's side kick panel.

Murano

located under the dash to the right of the steering column.

The Murano's BCM (Body Control Module) is blocked by some wiring and may not be noticeable right away.

You really have to bend your neck to find this one.

Example:

The Murano BCM Serial number is "85010" on this car and is right next to the barcode. Serial Number "85010" converts to PIN "8356".

"8356" is the PIN you would enter using the MVP or TCODE.

G35

Located next to the fuse panel on the inside drivers side kick panel.

Example:

The G35 BCM Serial number is "5CE42" on this car and is right next to the barcode. Serial Number "5CE42" converts to PIN "9684".

"9684" is the PIN you would enter using the MVP or TCODE.

Theo.

INFO ABOUT VALET KEYS

Valet Keys

A VALET KEY can be programmed in if all the customer wants is for the car to start.

The "Twist" knob ignition lock has a slot in the center that allows the smaller head Valet key to enter.

Even though the key is cut - if the key is not programmed to the vehicle it will not turn in the lock.

The steering lock mechanism will prevent the lock from turning even with the correct cut key.

Special Instructions for

2002-06 INFINITI Q45 & 2003-04 M45

BCM Location:

Right by OBD port with label facing shifter, don't need to take anything apart to get to it.

BCM does not look like other BCM's Black box with white label that has a 4 digit number, then a barcode then says unit# and 5 digit BMC serial # (10E80 in the example photo)

M45 & Q45 models equipped with this style Remote. **Remote Program Procedure:** (No tester needed)

The Remote buttons must be programmed before the transponder chip in the Remote can be programmed.

 \rightarrow Sit in car and close & lock all the doors.

 \rightarrow Use the mechanical metal key to insert & remove into the ignition lock cylinder very fast 6 times within 10 seconds.

 \rightarrow Note: Make sure each time you remove the key all the way.

 \rightarrow The emergency warning lights should blink twice.

 \rightarrow Insert the mechanical metal key and turn to the "ACC" position.

 \rightarrow Press any button on the Remote and the emergency warning lights should blink

twice. If only programming one remote, open the drivers door to close the cycle. Double check Remote functions.

 \rightarrow If programming more than one Remote, use the drivers door electric lock buttons to Unlock the door and then to Lock it again. Press any button on the Remote and the emergency warning lights should blink twice.

 \rightarrow You can program up to 4 Remotes this way. Opening the drivers door will close the cycle.

TYPE 13 20 DIGIT SYSTEM

WARNING: Do NOT waste your time and or MVP TOKENS trying to program PROX fobs that might have been already used on another car!

- > These new PROX keys "LOCK" to the car once programmed.
- > They cannot be re-used on any other car.

> We recommend purchasing these keys from a trusted supplier to ensure they are in fact brand new when you buy them.

> When programming ALL existing programmed keys are erased so make sure to gather any existing keys that you want to work and have them all ready when programming. Nissan recommends that if you have existing prox that you introduce the NEW prox as your first key or keys, followed by existing prox during the procedure.

> The maximum number of keys that the cars memory will hold is 4 total.

> The programming procedure programs the PROX Fobs to start the car and operate the RKE. Make certain that the battery is good in the PROX remotes.

> Ensure that the battery voltage on the vehicle is at least 12.2 volts when programming. Use a jump pack or jumper cables from a running car if you need to boost the voltage.

TYPE 13 20 DIGIT SYSTEM

NISSAN 20-DIGIT CODE BYPASS NOW AVAILABLE FOR PRO & SMART DONGLE

Smart Dongle owners with our NISSAN ADS-197 & ADC-198SD Software can now "BYPASS" the 20 Digit Codes on TYPE 13 NISSAN and INFINITI vehicles.

(Use version 12.26 or higher)

Not much changes in how these cars are done using the BYPASS except instead of displaying an OUTCODE you will see a screen like this:

PROGRAM PROX		
BYPASS ENABLED WOULD YOU LIKE TO USE IT?		
Х		\checkmark

If you select the CHECK mark, the PRO will BYPASS the codes automatically. If you select the X the unit will display the OUTCODE and allow you to enter the INCODE manually.

As an additional benefit the SMART DONGLE handles the SMART CARD calculation internally so this will save time and effort and make your job faster and easier than ever before!

TYPE 13 20 DIGIT SYSTEM

 DO YOU WANT TO PROGRAM
MORE KEYS?
 Press the √ if you have more
PROX to program.

 X
 √

> If you do not have any more PROX keys to program, continue to the next step.

> If you have more keys to program (up to 4 in total) follow the prompts on the PRO. It will have you repeat the last few steps and hold up the other PROX you want to program just like we did with the 1st PROX but the screen will say "hold up the "NEXT" PROX. You might want to number them so that you do not mix them up.

> It's important that the security light blink 5 times with each key as its accepted. If the light does not blink there is a problem, usually with the key (SEE TROUBLESHOOTING SECTION)

Continued on next page >

Tilco

TYPE 13 20 DIGIT SYSTEM

The dashboard should show the message in the photo above for a few seconds to confirm that the **KEY REGISTRATION IS COMPLETE.**

TYPE 13 20 DIGIT SYSTEM

TROUBLESHOOTING

After the INCODE is entered or the BYPASS is selected there are just 2 possible outcomes:

(what to do is shown next)

KEYS NOT BEING ACCEPTED?

If you have started the key registration procedure and now the car will not accept the new PROX.

What to do?

> IF when holding up the PROX & pressing the START/ STOP Button once, the security light does **not** blink 5 times & the car sounds a quick series of beeps.

The PROX has *not* been accepted. However, the car is most likely in the learning mode and should remain in learn mode until it is presented with a good prox.

More than likely, the wrong PROX part number is being used or you are trying to use a PROX that is "Locked" (Already programmed to another car and therefore CANNOT be programmed into the car you are working on.)

GET A NEW BRAND SPANKIN NEW KEY FROM A TRUSTED SOURCE!

See TROUBLESHOOTING on next page >>>>>

Tilco

Δ

TROUBLESHOOTING

TYPE 13 20 DIGIT SYSTEM

- Δ
- We have noticed problems all caused by trying to use "re-furbished" and or already used PROX KEYS on 20 Digit System cars.
- Sometimes in these cases it is difficult getting the customers original previously working PROX KEY to
- Program back in but in all cases we have seen, it is possible.
- If you have tried to add a key and now the car won't accept the original key back in here is exactly what to do:
- Disconnect the PRO from the cars OBD port.
- Keep all keys clearly away from the vehicle (at least 20-30 feet) with the ignition off, cycle the emergency key in the door.
- The security key icon should begin flashing on and off on the dash, when this happens, you are now capable of completing the learning process.
- Leave one key clearly away from the vehicle (at least 20-30 feet).
- Make sure you leave your foot off the brake pedal.
- Take one key and using the logo end of the prox push in firmly on the start button.
- Continue to hold the logo end of the key near the start button -you should see the little orange light in the middle of the start button slightly flickering.
- The system is trying to read the key. You should also hear a series of beeps at the same time.
- Once the system completes reading you should see the security icon flash five times.
- You should then be able to push the remote buttons and see that they are operating.
- If you want to program more keys, Do not start the vehicle.
- Remove this prox from the vehicle at least 20-30 feet away
- If you have more keys to program bring the second prox into the vehicle and follow the same procedure for showing the car the new key and watching for the 5 blinks from the security light.
- Continue until you have programmed all the keys you want to (up to 4. Max).
- Upon completion START THE VEHICLE using the first key introduced and then turn the car OFF.
- The dash should display "Key registration complete"
- Test all keys.

Delta FO Manual Operation 4-Sided Automotive Keys

The Delta FO cuts by code the unique angles found on the 4-sided keys for Tibbe locks, as used on some models of Jaguar and Ford vehicles.

The machine is very simple to operate, easy to maintain, and provides superb cutting results!

- Specially designed vise jaws securely grip the uniquely shaped 6-space and 8-space Tibbe keys
- Simple spacing mechanism assures quick operation, and accurate results for both 6-space and 8-space Tibbe type keys.
- Dial type depth adjustment simplifies depth calibration process
- Direct drive cutter system

eliminates v-belt and pulley maintenance

- Sealed ball bearing type drive motor
- Cobalt steel cutter extends service life
- "Soft Touch" nylon deburring brush
- Available 110V-AC

LEXUS KEYED IMMOBILIZER TYPE 1

SPECIAL FUNCTIONS **RESET IMMOBILIZER-** This function allows you to erase **T-CODE SOFTWARE #** CABLE / DONGLE: all keys and to place the immobilizer in the "Auto Learn ADS-125 ADC-250 / ADC- 251 Mode". This function is used when the customer has lost A (BLACK) DONGLE all their keys. **SMART DONGLE?** MAX # OF KEYS: ADD MASTER KEY- This function allows you to add a YES 8 Master key to the car's immobilizer system as long as **KEYS**: **SECURITY:** you have an existing pre-programmed Master key to start Re-usable. NO PIN CODE with. On Type 1 system cars it is possible to program a **COMPONENTS MATCHED?** key in as a Valet or as a Master YES ADD VALET KEY- This function allows you to add a Valet **MATCHING CAPABILITY?** key to the car's immobilizer system as long as you have NOT AVAILABLE an existing pre-programmed Master key to start with. The vehicle's immobilizer system cannot tell the difference **SECURITY LIGHT / THEFT INDICATOR:** between the transponder chip in the key, Light should be out at end of procedure. so it is possible to program a Master as a Valet into the If theft light blinks or comes on steady the key/keys have immobilizer system. not been accepted. ERASE KEYS- This function allows you to erase all keys except the key in the ignition lock at the time. **MORE INFO:** ALL Lexus TYPE 1 use 4C transponder chips in the keys. The same 4C chip can be programmed into the car as a MASTER or as a VALET key. A key that is programmed as a VALET cannot be used to introduce more keys into the system with the MVP or T-Code. How to tell if a programmed key is a MASTER or a VALET? Valet key- when first inserted into the ignition lock, the Security Light will stay on for 2 seconds and then stay off. Master key- when inserted into the ignition lock, the Security Light will not illuminate at all.

Tilco

LEXUS KEYED IMMOBILIZER TYPE 1

ADD MASTER KEY
(You must have a programmed MASTER KEY to perform this procedure)

Insert a Master key that is already registered into the vehicle. Turn the ignition lock to the "ON" position. The Security Light must be out when the key is in.

NOTE: If you do not have an existing Master key, you must use the "Reset Immobilizer" procedure to Reset the Immobilizer system. A Valet key will not work as a substitute for a Master Key.

LEXUS KEYED IMMOBILIZER TYPE 1

ADD VALET KEY
(You must have a programmed MASTER KEY to perform this procedure)

Insert a Master key that is already registered into the vehicle. Turn the ignition lock to the "ON" position. The Security Light must be out when the key is in.

NOTE: If you do not have an existing Master key, you must use the "Reset Immobilizer" procedure to Reset the Immobilizer system. A Valet key will not work as a substitute for a Master Key.

LEXUS KEYED IMMOBILIZER TYPE 1

ERASE KEYS
(You must have a programmed MASTER KEY to perform this procedure)

Insert a Master key that is already registered into the vehicle. Turn the ignition lock to the "ON" position. The Security Light must be out when the key is in.

NOTE: If you do not have an existing Master key, you must use the "Reset Immobilizer" procedure to Reset the Immobilizer system. A Valet key will not work as a substitute for a Master Key.

Tilco

LEXUS KEYED IMMOBILIZER TYPE 2

"Quick" RESET Immobilizer - Cont'd

What to do once the RESET is completed and the theft light is solid

WHAT TO DO ONCE THE THEFT LIGHT GOES SOLID

>"Auto Learn Mode" is indicated by the steady illumination of the Security Light.

>Once you see a solid theft light. Insert each key you want to program - but do not turn the key ON - only insert each key and remove after 5 seconds.

>The vehicle should accept 2 Master Keys and 1 Valet key in this manner.

>After the 3rd key - 2 Master Keys & 1 Valet Key "Auto Learn Mode" should close automatically.

>If you want to ADD more Master or Valet Keys , perform the PROGRAM KEY PROCEDURE.

HOW TO PROGRAM ONLY 1 KEY AFTER A RESET:

>You can close the cycle early after only 1 or 2 keys are inserted by turning the ignition lock from Off to On and back to Off 6-8 times, very fast, with a Master key.

>Remove the key and re-insert it and the Security Light should be completely out when there is a programmed key in the ignition.

HOW TO PROGRAM MORE THAN 2 MASTER KEYS:

>You can have up to 5 Master Keys and 3 Valet Keys.

>Once you have at least 1 programmed master key or two master keys and you want to add more use one of the masters using the PROGRAM KEY PROCEDURE to ADD MORE KEYS.

WHAT TO DO IF THE THEFT LIGHT WAS SOLID BUT NOW BLINKS AND WILL NOT SHUT OFF:

>Insert a key with a valid transponder leave the IGNITION OFF for 5 seconds. Turn the ignition lock from Off to On and back to Off 6-8 times, very fast, This should program as a MASTER KEY and close the cycle. If this does not work, check the chip in the key you are trying to use. It may be incorrect.

>Check the Key Warning Buzzer , it must be functioning properly for Key Learning.

>If the theft light blinks a "2 blinks then 1 blink" repeat pattern, this usually means the chip is incorrect.

>Once in the Auto Learn Mode the system will remain in this mode until a key - or keys is successfully learned. Even if you disconnect the battery on the vehicle and return much later the system will still be in Auto Learn Mode.

>If you try and perform an Immobilizer Reset and the system is already in Auto Learn Mode you will get "ERROR" on the tester.

>It is a good idea to keep a spare Valet Key handy. We have seen instances when the Auto Learn Mode would not close until 2 Master Keys and a Valet Key are learned. It never hurts to be prepared! If you end up needing a Valet Key, you won't have to give it to the customer, keep it for the next time. Since Toyota Keys don't need to be turned in the ignition for learning you won't even have to cut it.
LEXUS

LEXUS KEYED IMMOBILIZER TYPE 2

ADD MASTER or VALET KEY

(Use this method if you have at least 1 Master Key)

WARNING: If you do not have an existing Master key, you must use the "Reset Immobilizer" procedure to Reset the Immobilizer. A Valet key will not work as a substitute for a Master Key.

Insert a Master key that is already registered into the vehicle. Turn the ignition lock to the "ON" position. The Security Light must be out when the key is in. Connect and follow screens.

LEXUS

LEXUS KEYED IMMOBILIZER TYPE 2

ERASE KEYS

(Use this method if you have at least 1 Master Key)

Insert a Master key that is already registered into the vehicle. Turn the ignition lock to the "ON" position. The Security Light must be out when the key is in. Connect and follow screens.

NOTE: If you do not have an existing Master key, you must use the "Reset Immobilizer" procedure to Reset the Immobilizer system. A Valet key will not work as a substitute for a Master Key. On-Board Procedure

For Smart Entry LS430 and other models not listed here Included here as a courtesy, Not supported by Tech Support.

1. Driver's door open, all other doors closed, key removed from ignition switch.

Within 5 seconds:

Insert and remove the key from the ignition switch twice.

2. Within 40 seconds:

Close and open driver's door twice. Insert and remove the key from the ignition switch.

3. Within 40 seconds:

Close and open driver's door twice. Insert the key into the ignition switch and close the driver's door.

4. Switch ignition ON and OFF:

A. Once to program a key remote transmitter code whilst retaining the 7 original codes.

B. Twice to program a key remote transmitter code whilst erasing the original codes.

C. Three times to check how many key remote transmitters are currently registered.

D. Five times to erase all registered codes.

5. Remove key from ignition switch. System should now lock and unlock vehicle

once, twice or five times depending which mode has been selected. One to four

times, slowly, to indicate number of key remote transmitters registered.

6. Within 40 seconds:

Press and hold LOCK and UNLOCK buttons simultaneously for 1.5 seconds.

Within 3 seconds: Press any key remote transmitter button.

System should now lock and unlock vehicle once to confirm registration or twice

to indicate registration has failed.

7. Within 40 seconds:

To program additional remotes repeat step 60 now on each additional

remote you want programmed.

8. To exit programming mode open driver's door or insert key into ignition.

9. Step out of car with remote(s) in hand and test remote(s).

MAZDA

MAZDA PIN CODE LUCAS BOX SERIAL NUMBER TO PIN CODE CONVERTER

SPECIAL FUNCTIONS MAZDA PIN CODE- Use the PRO to convert the se-**T-CODE SOFTWARE #** CABLE / DONGLE: rial number to the "PINCODE" (code number). ADS-100 PRO ONLY NEEDS TO BE POWERED **UP WITH ANY DONGLE** To use the converter you don't plug into the car! MAX # KEYS: SMART DONGLE? YES 8 You can plug into a wall outlet with your Update cable or plug into the OBD2 port of most any **KEYS**: SECURITY: vehicle to power the PRO **RE-USABLE** N/A **COMPONENTS MATCHED?** Since the software does **NOT** communicate with car - you only need to supply power to the PRO YES MATCHING CAPABILITY? NONE **SECURITY LIGHT / THEFT INDICATOR:** Here is the Lucas Immobilizer Box. It's located under the dash up **MORE INFO:** above the brake pedal and you will need to carefully remove the If a new key has to be programmed in to the trim to get to it. car's Immobilizer system, all other keys will be erased. Therefore, all available keys will need to be present for programming. The Immobilizer 10800 1893L IF Unit and PCM (Power Control Module) cannot be taken off and used on other cars and visa-1010 versa. If there are less than 2 pre-programmed LC62 67 5G2 LUCAS MAS 52010563B transponder keys, a PIN CODE will be needed to open the Immobilizer Unit's programming mode. The serial number is located on the lower half of the label. In this case, the "PINCODE" for this box is "61766866". The serial number is always 10 numbers and the PINCODE is always 8 numbers.

be patient.

1/100

MAZDA PIN CODE LUCAS BOX SERIAL NUMBER TO PIN CODE CONVERTER

Use this ON-BOARD PROCEDURE FOR USING THE PIN CODE. (Does NOT involve using the PRO!)

> USE THIS PROCEDURE FOR WHEN THERE ARE NO KEYS OR ONLY 1 PRE-PROGRAMMED KEY AND YOU NEED TO PROGRAM MORE KEYS:

IMPORTANT: YOU MUST USE A OEM FACTORY KEY, AFTERMARKET KEYS WON'T WORK FOR THIS PROCEDURE.

REMEMBER: THIS IS ALL DONE AS AN ON-BOARD PROCEDURE ON THE CAR WITHOUT THE PRO!

	START BY DOING THIS:
1	Cut the mechanical cuts on each new transponder key.
2	Insert the first key and turn the ignition to the ON position and then back to the LOCK position, five times. You cannot leave the key in the ON or LOCK position for more than one second. Do not turn the key too fast or it will not register.
3	Turn the key back to the ON position and watch the flashing security light on the dash. The light should flash rapidly, less than 1 second on and off.
4	Within 20 seconds, turn the key to the LOCK position for 5 minutes. After 5 minutes the security light should decrease in flashing to 1.2 seconds between flashes.
5	Within 20 seconds, start to enter the PINCODE (password).

	THEN DO THIS:
A	Before you start, the security light on the dash should be flashing on and off for 1.2 seconds each.
В	For this purpose, let's say the PINCODE is "23681457". Below is an example.Do not turn the key too fast or it will not register.
С	The first digit in the PINCODE is a '2'. Turn the ignition key to the ON position while the security light is not illuminated. Count the illumination flashes TWO times and while the light is not illuminated turn the key to the LOCK position. (This is an example.)
D	The second digit in the PINCODE is a '3'. Within 30 seconds of turning the key to the LOCK position, turn the ignition key to the ON position while the security light is not illuminated. Count the illumination flashes THREE times and while the light is not illuminated turn the key to the LOCK position.
E	Repeat the above step to enter the rest of the PINCODE.
F	After you have entered the last number, turn the ignition to LOCK and then back ON. Once you have entered the PINCODE correctly, the security light will stop flashing and stay illuminated. If you make a mistake, just wait 45 seconds and start over. Do not remove the key.

Tilco

MAZDA PIN CODE LUCAS BOX SERIAL NUMBER TO PIN CODE CONVERTER

ON-BOARD PROCEDURE FOR USING THE PIN CODE. - Continued

ONC	CE YOU GET THE THEFT LIGHT TO ILLUMINATE SOLID DO THIS:	
1	When you have entered the PINCODE correctly, the security light should stay on and not flash.	
2	The car should now start. Start the car and the security light should stay lit for between 1 to 2 seconds.	
3	The car should now start. Start the car and the security light should stay lit for between 1 to 2 seconds.	
4	If you are going to add a second key for programming, within 20 seconds, remove the first key and insert the second key and start the car. The security light should stay lit for between 1 to 2 seconds.	
5	Stop if you have no more keys to program.	
6	You must wait 30 seconds to end the program mode.	
TIPS: > The ignition key should not be turned ON twice within one non-illumination cycle. > The ignition key should not be turned ON during an illumination cycle.		

> The ignition key should not be turned to LOCK twice within one non-illumination cycle.

ONCE YOU HAVE TWO KEYS PROGRAMMED YOU CAN ON BOARD PROGRAM MORE.

FINAL STEP-

Start the vehicle with each programmed E-Key.

This is VERY IMPORTANT & MUST be done for everything to work as it should.

ADDING A PROX FOB - You can use ADD-PROX on the menu to ADD additional E-PROX FOBS. The Process is very much the same as we have shown here except you only need 1 PROX FOB that you want to program.

YOU MUST HAVE AT LEAST ONE PROGRAMMED E-KEY TO USE BEFORE STARTING THE PROCEDURE.

IMPORTANT:

Before ADDING a PROX make sure you have at least one of the 2 already working PROX available.

This is because of the way MAZDA designed the system.

Before the PROX that has been added will work properly the engine MUST be started with TWO prox keys.

If you ADD a Prox but DO NOT have the other PROX available the new prox may not work properly until the engine is started with each of the 2 PROX KEYS.

The process can be completed later by starting the engine with the other prox but this is something to be aware of as your customer will likely NOT be happy until everything works as designed.

MAZDA

ADVANCED

2014-2016 MAZDA PROX

SPECIAL FUNCTIONS

FORCE IGNITION ON- Use this function when you have NO WORKING prox available. To use CLEAR OR ADD PROX the Ignition must first

be placed in the ON position.

Use FORCE IGNITION ON to accomplish this FIRST before doing anything else.

Once the Ignition is ON, leave it on and proceed to one of the procedures below.

CLEAR PROGRAM PROX- Use this function to CLEAR all existing prox remotes from the system and to PROGRAM TWO new ones.

You will need to have TWO prox remotes ready in order to complete this procedure.

The Ignition MUST be placed in the ON position to begin so either use FORCE IGNITION ON. If you have a working prox use it to place the ignition in the ON position.

ADD PROX- Use this function when you want to ADD a prox into the system without erasing any of the already programmed ones.

You will need to have ONE prox remote ready in order to complete this procedure. However, the Prox will not function completely until the engine is started with TWO Prox remotes. Until the engine starts with TWO prox remotes the new prox will only start the engine when held up to the Start/Stop button.

The Ignition MUST be placed in the ON position to begin so either use FORCE IGNITION ON. If you have a working prox use it to place the ignition in the ON position.

MORE INFO:

>Two or more remote transmitters (PROX) must be programmed for the engine to start.

>If any metallic or magnetic object is near the remote transmitter, communication between the remote transmitter and the vehicle may be obstructed, resulting in a failure to program.

2014-2016 MAZDA PROX

ADD PROX PROCEDURE

The ADD PROX procedure is essentially the same as the CLEAR PROGRAM PROCEDURE

EXCEPT it does not ERASE any previously programmed PROX and only programs 1 NEW Prox.

IMPORTANT:

Before ADDING a PROX make sure you have at least one of the 2 already working PROX available.

This is because of the way MAZDA designed the system.

Before any PROX that has been added will work properly the engine MUST be started with TWO prox keys.

If you ADD a Prox but DO NOT have the other PROX available the new prox will work and start the engine but only by holding it up to the start / stop button.

The process can be completed later by starting the engine with the other prox but this is something to be aware of as your customer will likely NOT be happy until everything works as designed.

REMOTE PROGRAMMING "PIN JUMP PROCEDURE"

Except on Lancer, Mirage and Outlander the Remote Head Programming is a separate On-Board Procedure that does not require the PRO

(Lancer, Mirage, Outlander, see instructions on next page.)

Carefully jump Pins 1 & 4 on the OBD2 port using a fused lead or use our handy ADC-194 adaptor

ADC194 Mitsubishi Remote Programming Adapter

Plug this adapter into the vehicles OBD port and follow your Mitsubishi on-board remote programming instructions. This device will jump the correct pins needed to program.

Once you have connected the Adaptor (or jumped the pins):

Step 1:

Insert the key into the ignition lock and leave it in the "Off" position.

Step 2:

Once you have the Jumper in place you will need to press the Emergency Flashers, also known as Hazard Lights, 6 (six) times within 10 seconds of setting the Jumper.

You should hear and see the door locks cycle.

Step 3:

Press the Lock button on the Remote Head 3 (three) times, within 10 seconds of watching the door locks cycle.

You should hear and see the door locks cycle again.

Program any other remotes now or they will not work any longer.

Remove the key and the Jumper.

1/100

LANCER, MIRAGE, OUTLANDER REMOTE HEAD KEY "A MANUAL PROCEDURE"

How to program the buttons on Remote Head Keys:

- 1. Connect the PRO to the car's OBD2 port using the TAN G dongle and ADC-250 cable.
- 2. Select +Mitsubishi/+USA/+LANCER CAN

3. Perform SMC or Web Security as necessary. Switch the IGNITION ON when instructed by the PRO.

4. ECU IDENTIFICATION SCREEN with some part numbers should appear. PRESS ENTER.

5. Go to the SPECIAL FUNCTION MENU.

6. SELECT +PROGRAM REMOTE

7. A WARNING "ALL KEYS WILL BE CLEARED DO YOU WISH TO CONTINUE." SELECT the CHECK MARK to continue.

8. RKE PROGRAMMING SCREEN should appear saying to perform manual procedure and the # of remotes currently programmed. LEAVE THE KEY IN THE ON POSITION, set the PRO aside so you can perform the necessary steps with the remote but make sure you can see the PRO screen.

9. PRESS AND HOLD the LOCK & UNLOCK BUTTON on the RKE for 2 seconds (or 4 flashes of the LED on the RKE)

10.Release both buttons and wait 1 second.

11 PRESS AND HOLD the UNLOCK button for 2 seconds (or 2 flashes of the RKE LED)

12. If the procedure has worked the LED on the RKE will flash once and the PRO screen should show the number of remotes programmed go up..

13. Repeat steps 9-12 until the max number of up to 4 RKE's are programmed.

NOTES:

A. ALL RKE MUST BE PROGRAMMED IN THE SAME SEQUENCE.

b. ALL PREVIOUSLY PROGRAMMED RKE's are erased and only those used in the procedure are programmed.

C. It may take a few tries. vary the timing a bit on holding the buttons until you are successful.

MITSUBISHI LANCER & OUTLANDER PROXIMITY SYSTEMS

STEP 2 Use this method to program the RKE functions of the PROX

The transponder chip in the Prox should now be programmed. You only need 1 Prox to program and start the vehicle. You can program additional Prox, if necessary. Now continue on to program the wireless part of the Prox - which is also

of the Prox - which is also known as FAST Key. Mitsubishi calls this Prox system F.A.S.T. which stands for:

> <u>F</u>reehand <u>A</u>dvanced <u>S</u>ecurity Transmitter

Remove the "Twist" knob by squeezing the two tabs together, one on each side.

Once you have the "Twist" knob removed the mechanical keyway is exposed.

Insert the factory Emergency Key into the ignition lock cylinder and turn to the "Run" position.

Next place the Prox Remote onto the Emergency key sticking out of the ignition.

KEY AND FAST KEY REG				
DO YOU WANT TO PROGRAM F.A.S.T. KEY				
YESENNER	NO=BACK			

Tilco

KEY AND FAST KEY REG	
PRESS LOCK BUTTON	
TWICE ON F.A.S.T.	
KEYS WITHIN 1 MIN	
CHIME WILL BE HEARD	

BACK TO EXIT

The chime will be very hard to hear and sounds about 3 seconds after pressing the remote twice. Program any other remotes you have now - before pressing the Back button to exit.

KEY AND FAST KEY REG
PROCEDURE COMPLETE
PRESS ENTER KEY

The "Twist" knob should now allow you to push in and turn it ON to start the car without any key in the ignition.

OUTBACK	2005-2014	SUBARU REMOTES TYPE 2		

>There are "4 Memory Slots" on Subaru Type 1 & Type 2 remote systems.

>Each remote has a unique 8 digit security code or ID.

> The ID code is found on a white sticker attached to the circuit board on the inside of the remote. Open each remote you want to program and write down this ID before starting out. If the sticker is not there or cannot be read it you will not be able to proceed. The ID code is the top line on the sticker (8 digits & no letters).

>Running the procedure shown here shown here fills the next open Memory Slot.

>Once 4 slots are filled running the procedure will fill the last slot with the new value and drop off one of the 4 previously programmed remotes.

>If you want to ERASE all remotes run the procedure 4 times using a random code such as 11111111.

>The car needs 20-30 seconds after getting procedure complete on the PRO each time before doing anything, so it's important to wait between programming.

>Be patient and go slowly, during this down time NO remotes will work.

>It's very important that the battery inside each remote is good and that the car's voltage is at least 12 volts.

>If you recieve an error message from the tester, wait 30 seconds and try the remote, it might have programmed anyway.

SPECIAL FUNCTIONS				
 KEYS PROGRAMMED- Displays the number of currently registered proximity keys. PROGRAM KEYS - AT LEAST 1 REGISTERED KEY IS REQUIRED TO USE THIS SOFTWARE. The PROGRAM KEYS function allows you to add PROX to the car's immobilizer system. At least 1 already registered PROX key to the vehicle is required to start the procedure off with. CLEAR KEYS - AT LEAST 1 REGISTERED KEY IS RE-QUIRED TO USE THIS SOFTWARE. The CLEAR KEYS function clears all previously registered PROX from the immobilizer system and leaves just the 1 registered prox as the only prox registered. At least 1 already registered PROX key to the vehicle is required to start the procedure off with. 	T-CODE SOFTWARE #CABLE / DONGLE:ADS-255ADC-250 / ADC- 251 A (BLACK) DONGLEMAX # PROX KEYS:SMART DONGLE?4YESPROX KEYS:SECURITY:Not re-usable but if erased can be added back into the same car.NO PIN CODECOMPONENTS MATCHED? YESYESMATCHING CAPABILITY? NONENONESECURITY LIGHT / THEFT INDICATOR:Light should be out anytime a programmed PROX is in th vehicle.			
MORE INFO: VEHICLE VOLTAGE- It's critical for success that the voltage be 12 volts or above. Use jumper cables or a battery pack whenever possible to boost voltage even if you think it's not needed. This will help avoid failure, especially during a 16 minute RESET. PROX BATTERY- Its necessary to have a good battery in ALL the PROX being used for these procedures. Re- place it with a fresh one if there is any doubt. PROX CIRCUIT BOARDS MUST MATCH - Some prox have the same part # and or FCC ID on the case but contain different circuit boards. Open them up and compare when possible. THIS SOFTWARE CAN'T BE BE USED FOR LOST KEYS SITUATIONS WHEN THERE IS NO REGISTERED KEY AVAILABLE.	 PROX MUST BE BRAND NEW- Only brand new virgin P can be added. If the PROX has been previously used on another car it w not / cannot program into your target car. Prox keys erased on your target car can be added back in that same car without a problem, provided you have at lead one registered prox key present to start off the procedure with. All keys lost - This software cannot be used if all keys have been lost. WATCH VIDEO - ADDING A PROX ON SUBARU Image: A car without a problem of the procedure of t

ΤΟΥΟΤΑ

TYPE 1 KEYED IMMOBILIZER

SPECIAL FUNCTIONS

RESET IMMOBILIZER- This function allows you to erase all keys and to place the immobilizer in the "Auto Learn Mode". This function is used when the customer has lost all their keys.

ADD MASTER KEY- This function allows you to add a Master key to the car's immobilizer system as long as you have an existing pre-programmed Master key to start with. On Type 1 system cars it is possible to program a key in as a Valet or as a Master.

ADD VALET KEY- This function allows you to add a Valet key to the car's immobilizer system as long as you have an existing pre-programmed Master key to start with. The vehicle's immobilizer system cannot tell the difference between the transponder chip in the key, so it is possible to program a Master as a Valet into the immobilizer system.

ERASE KEYS- This function allows you to erase all keys except the key in the ignition lock at the time.

MORE INFO:

ALL Lexus TYPE 1 use 4C transponder chips in the keys.

The same 4C chip can be programmed into the car as a **MASTER** or as a **VALET** key.

A key that is programmed as a VALET cannot be used to introduce more keys into the system with the MVP or T-Code.

How to tell if a programmed key is a MASTER or a VALET?

Valet key- when first inserted into the ignition lock, the Security Light will stay on for 2 seconds and then stay off.

Master key- when inserted into the ignition lock, the Security Light will not illuminate at all.

TYPE 2 KEYED IMMOBILIZER

Tilco

TYPE 2 KEYED IMMOBILIZER

"Quick" RESET Immobilizer - Cont'd

What to do once the RESET is completed and the theft light is solid

WHAT TO DO ONCE THE THEFT LIGHT GOES SOLID

>"Auto Learn Mode" is indicated by the steady illumination of the Security Light.

>Once you see a solid theft light. Insert each key you want to program - but do not turn the key ON - only insert each key and remove after 5 seconds.

>The vehicle should accept 2 Master Keys and 1 Valet key in this manner.

>After the 3rd key - 2 Master Keys & 1 Valet Key "Auto Learn Mode" should close automatically.

>If you want to ADD more Master or Valet Keys , perform the PROGRAM KEY PROCEDURE.

HOW TO PROGRAM ONLY 1 KEY AFTER A RESET:

>You can close the cycle early after only 1 or 2 keys are inserted by turning the ignition lock from Off to On and back to Off 6-8 times, very fast, with a Master key.

>Remove the key and re-insert it and the Security Light should be completely out when there is a programmed key in the ignition.

HOW TO PROGRAM MORE THAN 2 MASTER KEYS:

>You can have up to 5 Master Keys and 3 Valet Keys.

>Once you have at least 1 programmed master key or two master keys and you want to add more use one of the masters using the PROGRAM KEY PROCEDURE to ADD MORE KEYS.

WHAT TO DO IF THE THEFT LIGHT WAS SOLID BUT NOW BLINKS AND WILL NOT SHUT OFF:

>Insert a key with a valid transponder leave the IGNITION OFF for 5 seconds. Turn the ignition lock from Off to On and back to Off 6-8 times, very fast, This should program as a MASTER KEY and close the cycle. If this does not work, check the chip in the key you are trying to use. It may be incorrect.

>Check the Key Warning Buzzer, it must be functioning properly for Key Learning.

>If the theft light blinks a "2 blinks then 1 blink" repeat pattern, this usually means the chip is incorrect.

>Once in the Auto Learn Mode the system will remain in this mode until a key - or keys is successfully learned. Even if you disconnect the battery on the vehicle and return much later the system will still be in Auto Learn Mode.

>If you try and perform an Immobilizer Reset and the system is already in Auto Learn Mode you will get "ERROR" on the tester.

>It is a good idea to keep a spare Valet Key handy. We have seen instances when the Auto Learn Mode would not close until 2 Master Keys and a Valet Key are learned. It never hurts to be prepared! If you end up needing a Valet Key, you won't have to give it to the customer, keep it for the next time. Since Toyota Keys don't need to be turned in the ignition for learning you won't even have to cut it.

TYPE 2 KEYED IMMOBILIZER

ADD MASTER or VALET KEY

(Use this method if you have at least 1 Master Key)

WARNING: If you do not have an existing Master key, you must use the "Reset Immobilizer" procedure to Reset the Immobilizer. A Valet key will not work as a substitute for a Master Key.

Insert a Master key that is already registered into the vehicle. Turn the ignition lock to the "ON" position. The Security Light must be out when the key is in. Connect and follow screens.

=//=0

TYPE 2 KEYED IMMOBILIZER

Insert a Master key that is already registered into the vehicle. Turn the ignition lock to the "ON" position. The Security Light must be out when the key is in. Connect and follow screens.

CK	A "DOT" on t indicates the P	the key blade usually key has a 4D type chip inside

TYPE 4 KEYED IMMOBILIZER

What is "AUTO LEARN MODE" ? Why is it so important ?

> THEFT LIGHT - Watching the theft light is essential to success, locate it on the vehicle before starting any procedures!

> "AUTO LEARN MODE" is the "CONDITION" or "MODE" that the immobilizer is placed in following an Immobilizer Reset procedure.

(Quick or Regular, both should produce a solid theft light once the procedure is complete)

> The reason that "Auto Learn Mode" is so important is that this is the mode the system must be in order to accept new keys when there is no working MASTER key available. (ALL KEYS LOST)

> It is easy to tell if the car is in "Auto Learn Mode" by observing the theft light.

> A SOLID (not blinking) theft light is the clue and what you need to look for.

> Following an Immobilizer Reset take the key out of the ignition switch. Look carefully at the theft light. *Is it SOLID*?

>It's important that the Key Buzzer Warning be functioning properly for procedures to work properly. If there is any doubt, it's easy to test. See if the Key Buzzer Warning sounds when the drivers door is open and a key is inserted in the Ignition switch. Next see if it shuts off when the key is removed.

> A TYPE 4 immobilizer that is in "AUTO LEARN MODE" is ready to learn keys that are placed in the IGNI-TION switch. The switch should be left in the "OFF" position and it's the Key Buzzer Warning device inside the switch that signals the car to start learning the key. Insert each key to be learned in the Ignition for 5 seconds each without turning the switch. "AUTO LEARN MODE" will close automatically after 3 keys are learned. If you need to program less than 3 keys. Close "AUTO LEARN MODE" early by switching the Ignition ON/OFF very quickly 8-10 times.

WATCH VIDEO-TOYOTA 4 RUNNER QUICK RESET , CLOSE LEARN MODE WITH 2 MASTER KEYS AND 1 VALET KEY.

TYPE 4 KEYED IMMOBILIZER

Tilco

TYPE 4 KEYED IMMOBILIZER

"Quick" RESET Immobilizer - Cont'd

What to do once the RESET is completed and the theft light is solid

Once the theft light is solid, here's what to do:

> "Auto Learn Mode" is indicated by the steady illumination of the Security Light.

> Once you see a solid theft light. Insert each key you want to program - <u>but do not turn the key ON</u> - only insert each key and remove after 5 seconds.

> The vehicle should accept 2 Master Keys and 1 Valet key in this manner.

> After the 3rd key - 2 Master Keys & 1 Valet Key "Auto Learn Mode" should close automatically.

> If you want to ADD more Master or Valet Keys , perform the PROGRAM KEY PROCEDURE.

What if you only want to program 1 Master Key? Here's what to do:

> You can close the cycle early after only 1 or 2 keys are inserted by turning the ignition lock from Off to On and back to Off 6-8 times, very fast, with a Master key.

> Remove the key and re-insert it and the Security Light should be completely out when there is a programmed key in the ignition.

What if you want to program more than 2 Master Keys?

> You can have up to 5 Master Keys and 3 Valet Keys. Use the PROGRAM KEYS PROCEDURE.

If the theft light is solid or blinks & will not shut off:

> Repeat the process of turning the ignition lock from Off to On and back to Off 6-8 times, very fast, with a Master key.

> Check the Key Warning Buzzer , it must be functioning properly for Key Learning.

- > Check the chip in the key/s you are trying to use. It may be incorrect.
- > If the theft light blinks a "2 blinks then 1 blink" repeat pattern, this usually means the chip is incorrect.

> Once in the Auto Learn Mode the system will remain in this mode until a key - or keys is successfully learned. Even if you disconnect the battery on the vehicle and return much later the system will still be in Auto Learn Mode.

> If you try and perform an Immobilizer Reset and the system is already in Auto Learn Mode you will get "ERROR" on the tester.

> It is a good idea to keep a spare Valet Key handy. We have seen instances when the Auto Learn Mode would not close until 2 Master Keys and a Valet Keys are learned. It never hurts to be prepared! If you end up needing a Valet Key, you won't have to give it to the customer, keep it for the next time. Since Toyota Keys don't need to be turned in the ignition for learning you won't even have to cut it.

TYPE 4 KEYED IMMOBILIZER

ADD MASTER or VALET KEY

(Use this method if you have at least 1 Master Key)

WARNING: If you do not have an existing Master key, you must use the "Reset Immobilizer" procedure to Reset the Immobilizer. A Valet key will not work as a substitute for a Master Key.

Insert a Master key that is already registered into the vehicle. Turn the ignition lock to the "ON" position. The Security Light must be out when the key is in. Connect and follow screens.

=//=0

TYPE 4 KEYED IMMOBILIZER

Insert a Master key that is already registered into the vehicle. Turn the ignition lock to the "ON" position. The Security Light must be out when the key is in. Connect and follow screens.

Advanced Diagnostics USA Manual for MVP & T-CODE - © 2017

TYPE 2 & TYPE 4 KEYED IMMOBILIZER

Troubleshooting:

Problem: After a Reset, the car starts and runs but the theft light blinks.

Solution: The car is still in "learn mode" close the learning cycle by turning the ignition ON/OFF quickly at least 6-8 times until the light goes out.

Problem: Program key goes all the way thru to a successful conclusion with no errors but the car cranks and does not start.

Solution: Barring any other problems (low fuel, failed components etc) the car key memory may be full.

Meaning that 5 Master Keys and or 3 Valet Keys are already programmed and no more can be added.

Use ERASE KEYS with a MASTER KEY and this will ERASE all keys except the 1 Master Key used.

Now go back and use PROGRAM KEY to add any other keys you want to program.

On-Board Procedure

For Smart Entry LS430 and other models not listed here Included here as a courtesy, Not supported by Tech Support.

1. Driver's door open, all other doors closed, key removed from ignition switch.

Within 5 seconds: Insert and remove the key from the ignition switch twice.

2. Within 40 seconds:

Close and open driver's door twice. Insert and remove the key from the ignition switch.

3. Within 40 seconds:

Close and open driver's door twice. Insert the key into the ignition switch and close the driver's door.

4. Switch ignition ON and OFF:

A. Once to program a key remote transmitter code whilst retaining the $\frac{1}{7}$ original codes.

B. Twice to program a key remote transmitter code whilst erasing the original codes.

C. Three times to check how many key remote transmitters are currently registered.

D. Five times to erase all registered codes.

5. Remove key from ignition switch. System should now lock and unlock vehicle

once, twice or five times depending which mode has been selected. One to four

times, slowly, to indicate number of key remote transmitters registered.

6. Within 40 seconds:

Press and hold LOCK and UNLOCK buttons simultaneously for 1.5 seconds.

Within 3 seconds: Press any key remote transmitter button.

System should now lock and unlock vehicle once to confirm registration or twice

to indicate registration has failed.

7. Within 40 seconds:

To program additional remotes repeat step 60 now on each additional

remote you want programmed.

8. To exit programming mode open driver's door or insert key into ignition.

9. Step out of car with remote(s) in hand and test remote(s).

1/100

RKE PROGRAMMING

Use this method to PROGRAM THE REMOTE KEYLESS ENTRY

The RKE program separate from the transponder on TOYOTA Remote Head Keys.

Insert a key and turn the ignition lock to the "ON" position. Connect and follow screens.

REPEAT THIS PROCEDURE FOR UP TO 4 REMOTES.

Tilaa

RKE PROGRAMMING

Use this method to ERASE REMOTE KEYLESS ENTRY

Insert a key and turn the ignition lock to the "ON" position. Connect and follow screens.

ADD ADDITIONAL PROX - (PROGRAM KEY) **MUST HAVE AT LEAST 1 PROGRAMMED PROX - OTHERWISE MUST RESET**

1/100

Examples of different Types of PROX

Always check with the dealer for the exact part number of Prox to use on the vehicle you are working on. These are just a few examples shown for 2007 models. For later years there are quite a few different part numbers some interchangeable and some not!

Used Toyota/Lexus Proximity key warning!

Prox keys that are not BRAND NEW cannot be simply ADDED. There is a work around trick that will usually allow you to program in an already used Prox.

 Perform an Immobilizer reset introducing the used key first.
 Once you have the used key programmed and working use PROGRAM PROX to add back in the original working Prox key(s).
 MVP users take note: The above method may not always work 100%. Brand new keys from a reputable dealer is what we recommend. These program in 100% without issue.

Cross Interference:

It has been our experience that on occasion there can be cross signal interference when 2 or more Prox remotes are in the vehicle at the same time. During Programming keep only one Prox remote in the car at a time because of this.

Weak Prox Batteries:

Also, when using NEW Prox remotes if they get a failure it can be because the battery in the Prox is slightly weak from sitting around in the parts dept. and may not program in until the Prox battery is changed.

HOW TO FIND THE SYSTEM TYPE ON KEYED IMMOBILIZER TYPE 4 / TYPE 5 / TYPE 6 ON MODELS IN THE KEY LOOK UP LISTED AS "SPLIT YEAR"

BEFORE CUTTING ANY KEYS Plug into the car and see which system communicates

2010 MODELS:

Some use the "G" transponder key and some don't. It is possible to have 2 identical cars side by side and one still on the older "4D Chip "DOT" key and one on the "G" key.

Even looking the vehicle up by the VIN can give you the wrong key.

If the customer already has a working key that has the letter "G" stamped on the blade, then "G" key will work fine. If not follow the steps below.

Before cutting the transponder key - insert a mechanical key in the ignition and turn to the On position. Go to "RESET Immobilizer" and see if you can communicate with "TYPE 4" - If you can communicate with the vehicle using Immobilizer TYPE 4 then, it is NOT a "G" key vehicle.

Toyota TYPE 4 systems never use "G" transponders keys.

Toyota TYPE 5 systems never use the older 4D chip "DOT" Keys they use "G" transponder keys.

Communicates with **TYPE 4** system **NOT "G" Key** Use 4D Key after market or factory 08020 / 60160 If ALL KEYS LOST: Use TYPE 4 Quick Reset Immobilizer

2013-2014 MODELS:

Type 5 and 6 is a little harder but still possible. Determine what system will **RESET** the immobilizer.

One type (5 or 6) will "FAIL" but the other will go thru. The type that suceeds will determine if you need to cut a "G" Chip Key (TYPE 5) or an "H" Chip Key TYPE 6.

If you are using MVP this might cause you to use an extra token but will save you from cutting the wrong key!

RESET works with **TYPE 5** and FAILS with **TYPE 6** USE "G" Key

RESET works with **TYPE 5** and FAILS with **TYPE 5**

USE "H" Key

PRIUS 2004-2009 STEP 2 - Alternative for MODELS WITH SMART ENTRY

ON-BOARD PROGRAMMING ALTERNATIVE (Programs the Prox and RKE functions)

	ON-BOARD PROGRAMMING PROCEDURE FOR 2004-2009 PRIUS WITH SMART ENTRY (Programs the Prox and RKE functions)
STEPS	Carefully perform these actions: (if you mess up, start over!)
1	Close all the doors except the drivers door, that remains open.
2	Insert the Prox in and out of the programming slot on the dash twice.
3	Close & open drivers door twice, then open it & leave it open.
4	Insert the Prox in slot once and take it out of the slot.
5	Close then open the drivers door twice, then open it & leave it open.
6	Insert the Prox in the slot & leave it in.
7	Close the drivers door.
8	Press the start stop button to turn the ignition to "ON". Then turn it OFF.
9	Take the Prox out of the slot and the door locks should cycle.
10	Press the lock & unlock buttons together on the Prox for 1 second. Then press the lock button for 3 seconds.
11	The locks should cycle.
12	Open & close the drivers door then open it again. This should exit the learning mode. Test the key.

Included here as a courtesy, Not supported by Tech Support.

PRIUS 2004-2009 FOR ALL MODELS (BASIC & SMART ENTRY)

Common Problems with Programming Fobs into Prius models:

• Used or worn out Fob -

➡ Check the status of the Fob trying to be programmed. • Is it new? • Was it from another car? • Has it stopped working and now the customer wants it programmed again? • There is a battery in it that might need replacing. • Some just wear out and must be replaced with a new one. Brand new remote's will always program, unless of course, there is something actually wrong with the car.

• Either one of the 2 steps did not complete successfully.

➡ Have you checked to see whether the fobs were programmed into the immobilizer system. The Security Theft is out when there is a Fob in the Learning Slot? It may be necessary to close the immobilizer cycle manually. Put a already programmed Fob in the Learning Slot and press the Start button 5 times ON and Off. This should close the cycle manually. • Remember the car can hold only 4 Fobs into memory, it may be necessary to erase if you are trying to only Add a Fob into memory.

• The Smart Access Fobs have programmed successfully but the car does unlock when I try from the outside.

⇒ The "Lock Out" switch (under the steering column) has been depressed and is in Lock Out mode.

• The Smart Access Fobs have programmed successfully but the car will not Start unless I insert the Fob into the Learning Slot.

⇒ Check the "Lock Out" switch (under the steering column) and see if it has been depressed and is in Lock Out mode. Next, does the car actually have Smart Access? If there are no Rubber Push Buttons on the front outside door handles - there is no Smart Access on this car. Therefore there is no Proximity system, just a simple wireless system to lock and unlock the doors. You must insert the Fob into the Learning Slot to Start and drive the car.

• The ABS & VSC light stays on or Flashes and the car will not move.

Follow the procedure to reset the ABS dash lights.
 This is triggered when not using the correct dongle!
 Programming using the M dongle will NOT cause this problem.

PRIUS 2004-2009 FOR ALL MODELS (BASIC & SMART ENTRY)

Resetting the ABS Dash Lights Use this method only if you have no connected with the wrong dongle ABS & VSC lights are triggered when not using the correct dongle while the Pro is connected to the car.
